Implementation Guidelines
Get Labor Operations
Repository Version Rev4.5.4

Table of Contents

Get Labor Operations Guidelines

Overview

This document is a guideline on how to use the Get Labor Operations Business Object Document (BOD). Get Labor Operations has been defined in the context of STAR for the Automotive Retail Industry. The scope of this BOD is to define the Get Labor Operations process for individual consumers who service their automobiles through their OEM's authorized Dealers. The focus is on Dealer and OEM interactions, not third party organizations. NOTE: Although this is the traditional use of the Get Labor Operations, this BOD could be used to send Get Labor Operations information between any two business parties.

Implementation Guidelines provide detailed information regarding the structure and meaning of the Get Labor Operations BOD and corresponds directly to the Get Labor Operations schema. In addition to structure and meaning, the Implementation Guidelines identify various business rules for specific fields/components that due to their nature, i.e. field interdependence, are not possible to express using schema. Please note that although these business rules are not included in the schema, they **MUST** be followed to be STAR Compliant. Therefore, the Get Labor Operations Implementation Guidelines must be used in concert with the Get Labor Operations schema during development and should **NOT** be considered a supplement or substitution to the schema. For more information regarding STAR XML Data Compliance, please review the STAR Data Compliance Guidelines document located on the STAR Web site.

For a copy of the corresponding Get Labor Operations schema, please download the appropriate STAR schema repository from the XML portion of the STAR website (www.starstandard.org). Prior to downloading the schema, users are encouraged to download the STAR XML Reference/Implementation document also located on the XML portion of the STAR website. This document provides an overview of the STAR BOD development methodology, how to download and read STAR schema, and various frequently asked questions related to the implementation of STAR BODs.

STAR has followed the Open Application Group's Business Object Document methodology to develop the Get Labor Operations BOD. Where possible, STAR has mapped to existing OAGI fields and components. Note however that the STAR Get Labor Operations BOD is unique to the Retail Automotive industry and is not an extension of any existing OAGIS BODs.

For more information on the Open Applications Group's BODs and related documentation please refer to the Open Applications Group's Web site at (www.openapplications.org).

Schema Field Usage

STAR uses the same Noun in the schema for all the Noun/Verb combinations of the Get Labor Operations except the Get verb. Please refer to each Noun/Verb combination within this document to understand the requirements for each specific BOD. Although the Noun will always have every field defined for the Noun in the schema, each Noun/Verb combination may not use all of the fields. If a field is not used by a BOD, it will be noted in the business rules.

Business Scenario

The Labor Operations Binary Collaboration starts with the request of Labor Operations from the Dealer to the OEM. In response, Labor Operations information is sent from the OEM to the Dealer. This process occurs on demand as is needed. Note: This scenario is an example of how the Labor Operations BOD can be used. Implementations may vary.

Relationship Diagram

The following is a representation of the Noun for this BOD. It is a high level overview provided to give an idea of the hierarchy of the Noun's components.
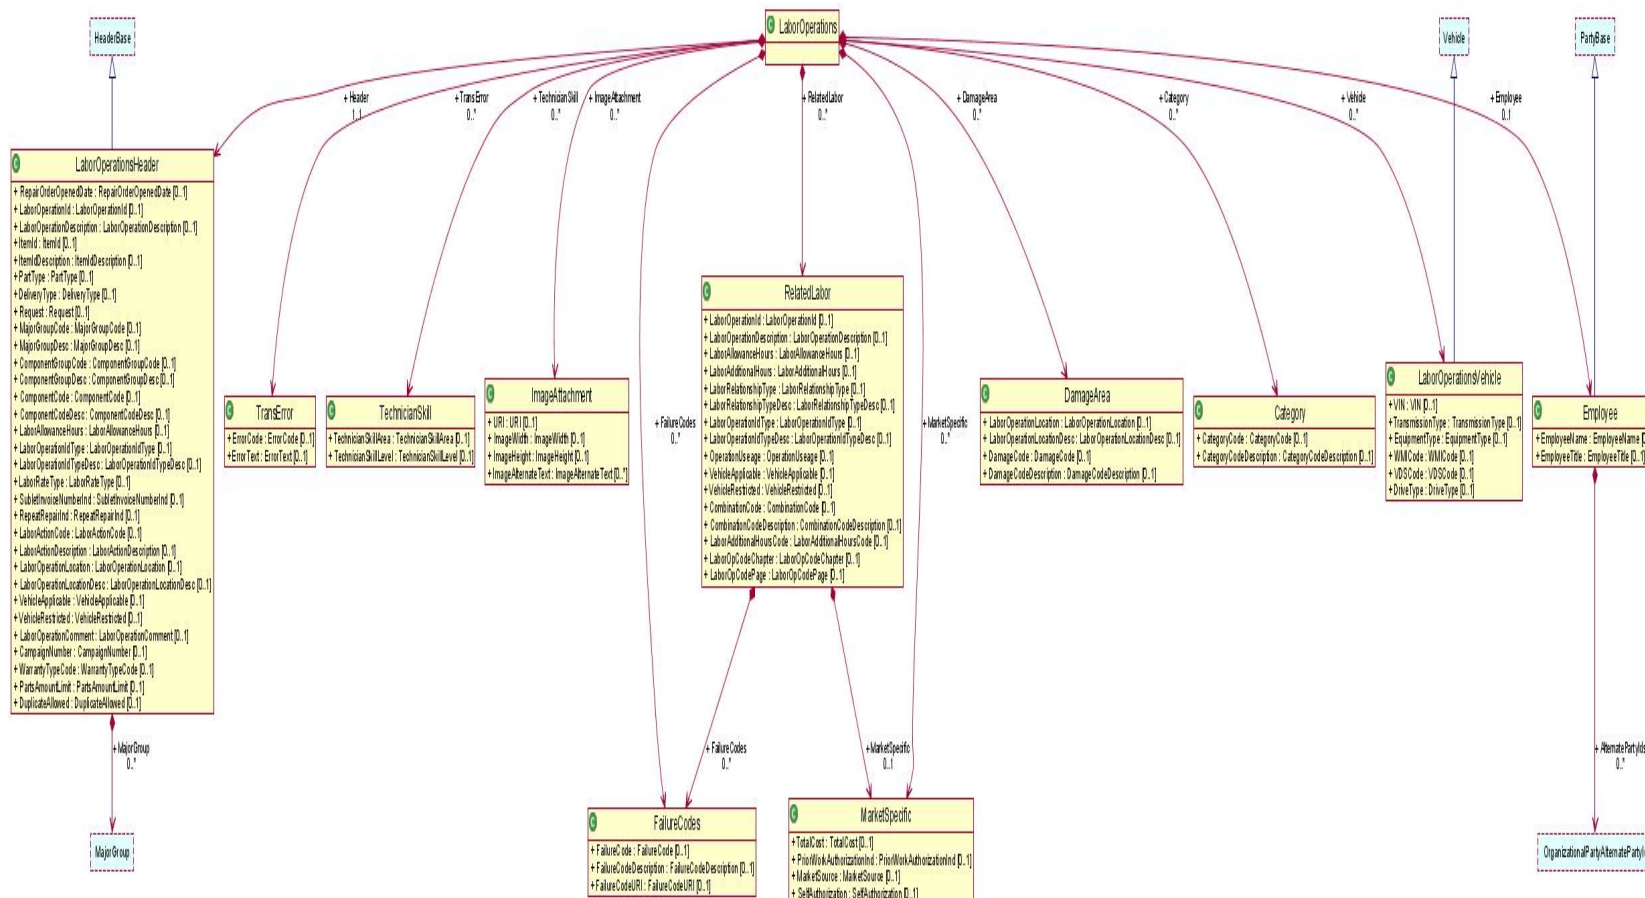

Schema Document Properties

Declared Namespaces

A schema can contain more than one namespace. According to Whatis.com, "In general, a namespace uniquely identifies a set of names so that there is no ambiguity when objects having different origins but the same names are mixed together." An example would be two namespaces that both defined an element called ID, without a namespace it would be impossible to determine which definition was being used.

Prefix	Namespace
Default namespace	http://www.starstandards.org/STAR
xml	http://www.w3.org/XML/1998/namespace
xsd	http://www.w3.org/2001/XMLSchema

Components and Data Types

Global definitions include components, code lists, and data types. Components are used to build the data structures that make up a Noun and it's requirements. Data types specify the type of data that a component's fields may contain. Not all definitions are included in this documentation. Please see either the STAR Code List guideline or Data Type Guidelines for further information.

AlternatePartyId

Name	AlternatePartyId

ApplicationArea

These field(s) use this type: **ApplicationArea.**

Name	ApplicationArea
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
Sender	Identifies characteristics and control identifiers that relate to the application that created the Business Object Document. The sender area can indicate the logical location of the application and/or database server, the application, and the task that was processing to create the BOD.	R	
CreationDateTime	is the date time stamp that the given instance of the Business Object Document was created. This date must not be modified during the life of the Business Object Document.	R	DateTime fields must be formatted as XML Schema Datetimes in UTC/GMT format without offsets. Example: 2003-11-05T13:15:30Z

Get Labor Operations

Field / Component	Description	R/O	Business Rule
Signature	If the BOD is to be signed the signature element is included, otherwise it is not. Signature supports any digital signature that maybe used by an implementation of OAGIS. The qualifyingAgency identifies the agency that provided the format for the signature. This element supports any digital signature specification that is available today and in the future. This is accomplished by not actually defining the content but by allowing the implementation to specify the digital signature to be used via an external XML Schema namespace declaration. The Signature element is defined to have any content from any other namespace. This allows the user to carry a digital signature in the xml instance of a BOD. The choice of which digital signature to use is left up to the user and their integration needs.	O	Optional. "qualifyingAgency" attribute.
BODId	The BODId provides a place to carry a Globally Unique Identifier (GUID) that will make each Business Object Document instance uniquely identifiable. This is a critical success factor to enable software developers to use the Globally Unique Identifier (GUID) to build the following services or capabilities: 1. Legally binding transactions, 2. Transaction logging, 3. Exception handling, 4. Re-sending, 5. Reporting, 6. Confirmations, 7. Security.	O	
Destination	Information related to the receiver of the BOD	R	See Destination Component.

Get Labor Operations

Abstract	no

Attributes

Field / Component	Description	R/O	Business Rule
revision	This should contain the STAR repository version in the following recommended format. 4.2.1_M20080416. Where the first part indicates the version of the STAR repository and anything after the _ indicates the Milestone build that is being used. If referring to an official published version then only the STAR Repository version is required.	O	
release	Indicates the OAGIS release that this BOD belongs.	O	
environment	Indicates whether this BOD is being sent in a "Test" or a "Production" mode. If the BOD is being sent in a test mode, it's information should not affect the business operation. However, if the BOD is sent in "Production" mode it is assumed that all test has been complete and the contents of the BOD are to affect the operation of the receiving business application(s).	O	
lang	Indicates the language that the contents of the BOD is in unless otherwise stated.	O	
bodVersion	Deprecated as of STAR 4.2.2. It is recommended to use the revision attribute to identify the repository and the noun. May be removed in a new major version of the STAR repository. Indicates the version number of the BOD.	O

Destination

Get Labor Operations

These field(s) use this type: **Destination.**

Name	Destination
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
DestinationNameCode	Code for destination of file (i.e.Short Manufacturer or DSP code)	O	Must use a valid code from the ShortMfg/RSP list on http://www.starstandards.org
DestinationURI	Physical address of the destination	O	
DestinationSoftwareCode	Additional information about the destination application	O	
DestinationSoftware	For which software destination file is intended (may not be known).	O	
DealerNumber	Target Dealer Code receiving information	O	
StoreNumber	Dealer code store number (DMS assigned)	O	
AreaNumber	Dealer code area number (DMS vendor assigned)	O	
DealerCountry	Target Dealer country location	O	
PartyId	The Party Id field uniquely identifies the Receiver of the message. This element can be used for parties within the Automotive Community as well as external parties. Party Id is not intended as a replacement for the Dealer Number. Suggested formats for OEMs or other large institutions include: DUNs Number, ShortMfgCode + DUNs, or ShortMfgCode. The suggested format for Dealers is: ShortMfgCode+Dealer Number.	O	
LocationId	The Location Id field uniquely identifies the location of the Receiver of a message. This Id may be aligned with a physical address or data centers. This field provides an additional level of granularity beyond the usage of the Party Id for additional routing and deliver of data.	O	
ServiceId	The Service Id field identifies the particular service to which a message is being sent, e.g., an inventory service.	O

Data Elements and Components

Field / Component	Description	R/O	Business Rule
Verb		R	
ReturnCriteria	ReturnCriteria identifies the content that is to be returned, given query success. In essence, the expression here has the effect of filtering the part(s) of the found element(s) that are to be returned. ReturnCriteria plays no role in the query itself. That is handled as a match against the request BOD's noun exemplar. ReturnCriteria allows the sender of the BOD to indicate which information (down to the field level) is requested to be returned, given that the query has been successful in matching the exemplar to existing nouns. That is, in a GetListPurchaseOrder, if one or more PurchaseOrders with a TotalPrice = $1M were found, ReturnCriteria tells the BOD recipient which parts of the PurchaseOrder should be populated with content when the response (ShowPurchaseOrder) is formulated. The expressionLanguage indicates the expression language being used. In order for the ReturnCriteria expression to be evaluable by the BOD recipient, the recipient must be capable of processing and interpreting the specified expression language. XPath is the default, due to its ubiquity among XML processing technologies.	R

Data Elements and Components

Get Labor Operations

Field / Component	Description	R/O	Business Rule
Get	The Get verb is to communicate to a business software component a request for an existing piece of information to be returned. The Get may be paired with most of the nouns defined in the OAGIS specification.The response to this request is the Show verb. The behavior of a BOD with a Get verb is quite predictable across most of the nouns it may be paired with.The Get is designed to retrieve a single piece of information by using that information's primary retrieval field, or key field. The Get verb is not used to request several documents at once. The GetList verb is designed to achieve that purpose and will be covered in more detail later.Selection Criteria:There are two types of selection capabilities for most BOD's that use the Get verb.1) The first selection capability is called Field-Based Selection. Within a Get-based Business Object Document, the first Data Type that occurs in a specific BOD structure is commonly used to provide the Field-Based Selection criteria. This is always defined within the specific BOD and is commonly the required fields for that specific Data type.The Field-Based Selection enables the requester to provide a value or values (in the case of multiple required Field Identifiers), in the required fields. Then the responding component uses those values to find and return the requested information to the originating business software component.2) The second type of selection capability for Get-based BODs is called Data Type Selection. Data Type selection enables the requester to identify which Data Types within the noun are requested to be returned in the response. The use of this capability is described for each corresponding Data Type for all BODs that use the Get verb. The Data Types are identified for retrieval within the Get instance of a BOD by including the name of the Data Type in the meta data but without any Field Identifiers or Segments identified within the Data Type. This will signify to the responding application that all of the data that corresponds to that Data Type is to be included in the response.If the Data Type is not requested, the Data Type identifier is not included in the Get request and this will signify to the responding component that the Data Type is not to be returned. Abstract	no

Get Labor Operations

Data Elements and Components

Field / Component	Description	R/O	Business Rule
DocumentDateTime	Is the date and time the document was last created. This is not the date and time that the BOD message instance was created.	O	DateTime fields must be formatted as XML Schema DateTimes in UTC/GMT format without offsets. Example: 2003-11-05T13:15:30Z
SecondaryPassword	Secondary password used to validate access to the dealer information	O	(INACTIVE)
SecondaryDealerNumber	Identifies secondary dealer number if different than primary "Dealer Number"	O	(INACTIVE)
RepairOrderOpenedDate	System date when Repair Order was opened	O	
LaborOperationId	Currently assigned code for this operation (preferably manufacturer code)	O	
LaborOperationDescription	Description of a particular operation code	O	
ItemId	Part number identifier - Part number, unless part type designates a manufacturer code	O	
ItemIdDescription	Part number detail description	O	
PartType	Specifies whether the parts are indicated by manufacturer part code or Part Number	O	
DeliveryType	Transaction request delivery type	O	
Request	Type of Batch Request	O	
MajorGroupCode	Code identifying a labor operation's major group.	O	
MajorGroupDesc	Description of the Major Group for labor operation	O	
ComponentGroupCode	Code identifying a labor operation's component group.	O	
ComponentGroupDesc	Description of the Component Group for labor operation	O	
ComponentCode	Code identifying a labor operation's component code.	O	
ComponentCodeDesc	Description of the Component Code for labor operation	O	

Get Labor Operations

Field / Component	Description	R/O	Business Rule
LaborAllowanceHours	Flat rate labor hour allowance for this operation	O	
LaborOperationIdType	Labor operation category code	O	
LaborOperationIdTypeDesc	Labor operation code type description. Possible Values: Customer Satisfaction, Driveability, Optional, safety, Related, Primary, Rental/Loaner, Towing, Sublet, and Dealer Prep.	O	
LaborRateType	Designates labor rate type	O	
SubletInvoiceNumberInd	Indicates whether an invoice number is required when the labor operation was sublet (e.g. towing)	O	
RepeatRepairInd	Identifies repair as having been performed previously on the vehicle	O	
LaborActionCode	Manufacturer-assigned code to describe type of labor performed (i.e., Repair, Replace, Adjust)	O	
LaborActionDescription	Labor operation service action description.(e.g. Instructions as to how and when to use this labor operation)	O	
LaborOperationLocation	Code identifying a labor operation's service locations. It is the location on the vehicle where the service will be performed.	O	
LaborOperationLocationDesc	The Labor Operation Service Location Description is a textual description of the Labor Operation Service Location code identify	O	
VehicleApplicable	Indicates whether this labor operation applies to a vehicle as built or equipped.	O	
VehicleRestricted	Indicates whether a labor operation is restricted for a vehicle.	O	
LaborOperationComment	Information for the dealer regarding usage of the labor operation.	O	
CampaignNumber	Manufacturer assigned recall/campaign number	O	
WarrantyTypeCode	A code used to classify the labor operation into coverage categories	O	
PartsAmountLimit	The parts dollar limit for the table entry	O	
DuplicateAllowed	A code to indicate whether or not duplicate claims will be accepted for payment without authorization	O

RequestVerb

Name	RequestVerb
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
Verb		R	
ReturnCriteria	ReturnCriteria identifies the content that is to be returned, given query success. In essence, the expression here has the effect of filtering the part(s) of the found element(s) that are to be returned. ReturnCriteria plays no role in the query itself. That is handled as a match against the request BOD's noun exemplar. ReturnCriteria allows the sender of the BOD to indicate which information (down to the field level) is requested to be returned, given that the query has been successful in matching the exemplar to existing nouns. That is, in a GetListPurchaseOrder, if one or more PurchaseOrders with a TotalPrice = $1M were found, ReturnCriteria tells the BOD recipient which parts of the PurchaseOrder should be populated with content when the response (ShowPurchaseOrder) is formulated. The expressionLanguage indicates the expression language being used. In order for the ReturnCriteria expression to be evaluable by the BOD recipient, the recipient must be capable of processing and interpreting the specified expression language. XPath is the default, due to its ubiquity among XML processing technologies.	R

Abstract	no

Data Elements and Components

Get Labor Operations

Field / Component	Description	R/O	Business Rule
LogicalId	Provides the logical location of the server and applications from which the Business Object Document originated. It can be used to establish a logical to physical mapping, however its use is optional. Each system or combination of systems should maintain an external central reference table containing the logical names or logical addresses of the application systems in the integration configuration. This enables the logical names to be mapped to the physical network addresses of the resources needed on the network. Note: The technical implementation of this Domain Naming Service is not dictated by this specification. This logical to physical mapping may be done at execution time by the application itself or by a middleware transport mechanism, depending on the integration architecture used. This provides for a simple but effective directory access capability while maintaining application independence from the physical location of those resources on the network	O	
Component	Provides a finer level of control than Logical Identifier and represents the business application that issued the Business Object Document. Its use is optional. For STAR's use this is the DCS Software code name	R	
Task	Describes the business event that initiated the need for the Business Object Document to be created. For STAR, the task is defined in the Implementation Guidelines for each BOD. It is usually a short description of the BOD. Ex: SalesLead, CreditDecision, etc.	R	
ReferenceId	Enables the sending application to indicate the instance identifier of the event or task that caused the BOD to be created. This is used to correlate a response BOD to an originating BOD	O	
AuthorizationId	Identifyies the authorization level of the user or application that is sending the Business Object Document Message. This authorization level being recognized be the receiving system indicates what can be done on the receiving system. For STAR, this is the User ID.	O	
CreatorNameCode	DCS Software Creator Code	R	
SenderNameCode	Additional information about the sending platform (i.e., Short MFG or DSP code).	R	Must use a valid code from the ShortMfg/RSP list on http://www.starstandards.org
SenderURI	Physical address of the sender	O	

Get Labor Operations

Field / Component	Description	R/O	Business Rule
DealerNumber	Dealer Code of source of information	O	Dealer Number is Required if originating from DMS.
StoreNumber	Dealer code store number (DMS assigned)	O	
AreaNumber	Dealer code area number (DMS vendor assigned)	O	
DealerCountry	Source Dealer country location	O	Reference Country enumerator.
Language	This code is used to define the language of the data used in this transaction	O	Reference Language enumerator.
DeliverPendingMailInd	Indicates if the user requests to receive pending mail that has been stored and has yet not been delivered yet. By selecting 0, the user will only receive the response for the current transaction the user is performing.	O	1 - Receive Pending Mail. 0 - Do not receive pending mail.
Password	Token for application specific authentication. Used to authenticate dealership/users through application specific security	O	
SystemVersion	The sender's software version number.	O	
PartyId	The Party Id field uniquely identifies the Sender of the message. This element can be used for parties within the Automotive Community as well as external parties. Party Id is not intended as a replacement for the Dealer Number. Suggested formats for OEMs or other large institutions include: DUNs Number, ShortMfgCode + DUNs, or ShortMfgCode. The suggested format for Dealers is: ShortMfgCode+Dealer Number.	O	
LocationId	The Location Id field uniquely identifies the location of the Sender of a message. This Id may be aligned with a physical address or data centers. This field provides an additional level of granularity beyond the usage of the Party Id for additional routing and deliver of data.	O	
ServiceId	The Service Id field identifies the particular service from which a message is being sent, e.g., an inventory service.	O

Code Value	Description
Other	

DamageCode

These field(s) use this type: **DamageCode.**

Type of damage that occurred (Ex: scratched, dented, etc)

Name	DamageCode

*Base XSD Type: string

Date

Date conforms to ISO 8601 format rules EX: \d\d\d\d-\d\d-\d\d

Name	Date

*Base XSD Type: date

DateTime

These field(s) use this type: **CreationDateTime.**

Date and time conforms to ISO 8601format rules without offset EX:2003-11-05T13:15:30Z

Name	DateTime

*Base XSD Type: dateTime

DeliveryType

These field(s) use this type: **DeliveryType.**

Transaction request delivery type

Name	DeliveryType
*Base XSD Type: string	

Code Value	Description
Batch	The total accumulation of captured transactions sent at a set interval
Interactive	Transactions that take place in real-time

DocumentDateTime

These field(s) use this type: **DocumentDateTime.**

Is the date and time the document was last created. This is not the date and time that the BOD message instance was created.

Name	DocumentDateTime
*Base XSD Type: dateTime	

DriveType

These field(s) use this type: **DriveType.**

Designates vehicle drive type

Name	DriveType
*Base XSD Type: string	

Code Value	Description
Front	Front wheel drive
Rear	Rear wheel drive

DuplicateAllowed

These field(s) use this type: **DuplicateAllowed.**

A campaign related field specifying the disposition of a campaign Ex: completed, open, etc.

Name	DuplicateAllowed

Base XSD Type: string

EmployeeName

These field(s) use this type: **EmployeeName.**

Employee Name

Name	EmployeeName

Base XSD Type: string

EmployeeTitle

These field(s) use this type: **EmployeeTitle.**

Employee Title

Name	EmployeeTitle

Base XSD Type: string

EquipmentType

These field(s) use this type: **EquipmentType.**

Type of equipment on the vehicle

Name	EquipmentType

Base XSD Type: string

ErrorCode

These field(s) use this type: **ErrorCode.**

Error Code

Name	ErrorCode

*Base XSD Type: string

ErrorText

These field(s) use this type: **ErrorText.**

Descriptive Error Text

Name	ErrorText

*Base XSD Type: string

ExpirationDate

These field(s) use this type: **ExpirationDate.**

Expiration Date

Name	ExpirationDate

*Base XSD Type: date

Expression

These field(s) use this type: **SelectExpression.**

Name	Expression

*Base XSD Type: string

ExpressionLanguage

Name	ExpressionLanguage

*Base XSD Type: string

FailureCode

These field(s) use this type: **FailureCode.**

Manufacturer-assigned code to describe the reason that a fault or symptom occurred

Name	FailureCode

*Base XSD Type: string

FailureCodeURI

These field(s) use this type: **FailureCodeURI.**

URL address for graphical image of failure code

Name	FailureCodeURI

*Base XSD Type: anyURI

FuseCavityCode

These field(s) use this type: **FuseCavityCode.**

Alternate alpha representation when the fuse cavity part is designated (stamped) by a letter

Name	FuseCavityCode

*Base XSD Type: string

ImageAlternateText

These field(s) use this type: **ImageAlternateText.**

Image alternate text. Example: "1997 Honda Accord"

Name	ImageAlternateText

Base XSD Type: string

Indicator

These field(s) use this type: **DeliverPendingMailInd.**

0 = No, 1 = Yes

Name	Indicator

Base XSD Type: string

Code Value	Description
0	
1	

IssuingState

These field(s) use this type: **IssuingState.**

Indicates that State where the license was issued.

Name	IssuingState

Base XSD Type: string

LaborActionCode

These field(s) use this type: **LaborActionCode.**

Manufacturer-assigned code to describe type of labor performed

Get Labor Operations

Name	LaborActionCode

*Base XSD Type: string

LaborAdditionalHoursCode

These field(s) use this type: **LaborAdditionalHoursCode.**

Code for allowing flexibility for hours needed to complete a specific labor operation

Name	LaborAdditionalHoursCode

*Base XSD Type: string

LaborOpCodeChapter

These field(s) use this type: **LaborOpCodeChapter.**

Electronic Section number of the Flat Rate Manual CD where Labor Operation Code is found

Name	LaborOpCodeChapter

*Base XSD Type: string

LaborOpCodePage

These field(s) use this type: **LaborOpCodePage.**

Electronic page number in Flat Rate Manual CD where Labor Operation Code is found

Name	LaborOpCodePage

*Base XSD Type: string

LaborOperationComment

These field(s) use this type: **LaborOperationComment.**

Free form comment regarding the labor operation.

Name	LaborOperationComment

*Base XSD Type: string

LaborOperationIdType

These field(s) use this type: **LaborOperationIdType,LaborOperationIdType.**

Labor operation category code

Name	LaborOperationIdType

*Base XSD Type: string

LaborOperationLocation

These field(s) use this type: **LaborOperationLocation,LaborOperationLocation,LaborOperationLocation.**

Code Indicating Position/Location on Vehicle where labor was performed

Name	LaborOperationLocation

*Base XSD Type: string

LaborOperationLocationDesc

These field(s) use this type: **LaborOperationLocationDesc,LaborOperationLocationDesc,LaborOperationLocationDesc.**

The Labor Operation Service Location Description is a textual description of the Labor Operation Service Location code identify

Name	LaborOperationLocationDesc

*Base XSD Type: string

LaborRateType

These field(s) use this type: **LaborRateType.**

Designates labor rate type

Name	LaborRateType

‡Base XSD Type: string

LaborRelationshipType

These field(s) use this type: **LaborRelationshipType.**

Identifies the relationship between the main labor operation and a related labor operation

Name	LaborRelationshipType

‡Base XSD Type: string

Language

These field(s) use this type: **Language.**

Language conforms to ISO 639-2 rules. Note the format for this field is language-Country (see Country data type for the list of countries with definitions). AA "Afar", AB "Abkhazian", AF "Afrikaans", AM "Amharic", AR "Arabic", AS "Assamese", AY "Aymara", AZ "Azerbaijani", BA "Bashkir", BE "Byelorussian", BG "Bulgarian", BH "Bihari", BI "Bislama", BN "Bengali" "Bangla", BO "Tibetan", BR "Breton", CA "Catalan", CO "Corsican", CS "Czech", CY "Welsh", DA "Danish", DE "German", DZ "Bhutani", EL "Greek", EN "English" "American", ES "Spanish", ET "Estonian", EU "Basque", FA "Persian", FI "Finnish", FJ "Fiji", FO "Faeroese", FR "French", FY "Frisian", GA "Irish", GD "Gaelic" "Scots Gaelic", GL "Galician", GN "Guarani", GU "Gujarati", HA "Hausa", HI "Hindi", HR "Croatian", HU "Hungarian", HY "Armenian", IK "Inupiak", IN "Indonesian", IS "Icelandic", IT "Italian", IW "Hebrew", JA "Japanese", JI "Yiddish", JW "Javanese", KA "Georgian", KK "Kazakh", KL "Greenlandic", KM "Cambodian", KN "Kannada", KO "Korean", KS "Kashmiri", KU "Kurdish", KY "Kirghiz", LA "Latin", LN "Lingala", LO "Laothian", LT "Lithuanian", LV "Latvian" "Lettish", MG "Malagasy". LocationDescription

Location Description

Name	LocationDescription

*Base XSD Type: string

MajorGroupCode

These field(s) use this type: **MajorGroupCode,MajorGroupCode.**

Code identifying a major group.

Name	MajorGroupCode

*Base XSD Type: string

Make

These field(s) use this type: **Make.**

Vehicle make code - Usually available in the VIN number (use NCIC code).

Name	Make

*Base XSD Type: string

MarketSource

These field(s) use this type: **MarketSource.**

Indicates marketing location of which the labor operation request is coming from

Name	MarketSource

*Base XSD Type: string

Model

These field(s) use this type: **Model.**

Manufacturer-assigned model code of vehicle - Usually available in the VIN number (use NCIC code)

Name	Model

*Base XSD Type: string

ModelDescription

These field(s) use this type: **ModelDescription.**

Descriptive vehicle model name

Name	ModelDescription

*Base XSD Type: string

ModelYear

These field(s) use this type: **ModelYear.**

Vehicle designated model year

Name	ModelYear

*Base XSD Type: gYear

Name

Name of the Party.

Name	Name

*
Base XSD Type: string

Note

A free form note.

Name	Note

*
Base XSD Type: string

OperationUseage

These field(s) use this type: **OperationUseage.**

Operation Usage comments (e.g. Overlapping information)

Name	OperationUseage

*
Base XSD Type: string

PartType

These field(s) use this type: **PartType.**

Specifies whether the parts are indicated by manufacturer part code or Part Number - H = Manufacturer Part Code, P = Part Number

Name	PartType

*
Base XSD Type: string

Code Value	Description
H	Manufacturer Part Code

Code Value	Description
P	"P" = Pending

PriorWorkAuthorizationInd

These field(s) use this type: **PriorWorkAuthorizationInd.**

Indicates that if this labor operation is used, the claim requires authorization

Name	PriorWorkAuthorizationInd
*Base XSD Type: string	

Code Value	Description
0	
1	

Reference

These field(s) use this type: **ReferenceId.**

Reference notation

Name	Reference
*Base XSD Type: string	

ReferenceNumber

Reference number

Name	ReferenceNumber
*Base XSD Type: string	

RepairOrderOpenedDate

These field(s) use this type: **RepairOrderOpenedDate.**

System date when Repair Order was opened

Name	RepairOrderOpenedDate

*Base XSD Type: date

RepeatRepairInd

These field(s) use this type: **RepeatRepairInd.**

Identifies repair as having been performed previously on the vehicle

Name	RepeatRepairInd

*Base XSD Type: string

Code Value	Description
0	
1	

Request

These field(s) use this type: **Request.**

Type of request

Name	Request

*Base XSD Type: string

Code Value	Description
Complete	
Changes	

SecondaryPassword

These field(s) use this type: **SecondaryPassword.**

Secondary password used to validate access to the dealer information

Name	SecondaryPassword

*Base XSD Type: string

SelfAuthorization

These field(s) use this type: **SelfAuthorization.**

This code indicates whether or not a dealer is allowed to authorize claims

Name	SelfAuthorization

*Base XSD Type: string

ShortMfg

These field(s) use this type: **SenderNameCode,DestinationNameCode.**

Short Manfacturer or RSP Codes

Name	ShortMfg

*Base XSD Type: string

StateOrProvince

Is the State or Province of a given Address.

Name	StateOrProvince

*Base XSD Type: string

SubletInvoiceNumberInd

These field(s) use this type: **SubletInvoiceNumberInd.**

Indicates whether an invoice number is required

Name	SubletInvoiceNumberInd
*Base XSD Type: string	

Code Value	Description
0	
1	

SystemVersion

These field(s) use this type: **SystemVersion.**

The sender's software version number .

Name	SystemVersion
*Base XSD Type: string	

TechnicianSkillArea

These field(s) use this type: **TechnicianSkillArea.**

Type of training required to perform the labor operation

Name	TechnicianSkillArea
*Base XSD Type: string	

TechnicianSkillLevel

These field(s) use this type: **TechnicianSkillLevel.**

Level of training required to perform the labor operation

Name	TechnicianSkillLevel

Base XSD Type: string

Text

These field(s) use this type:
CreatorNameCode,StoreNumber,AreaNumber,Password,DestinationSoftwareCode,DestinationSoftware,StoreNumber,AreaNumber,LogicalId,Component,T

Indicates generic text type

Name	Text

Base XSD Type: string

TransmissionType

These field(s) use this type: **TransmissionType.**

Vehicle Transmission type - 3 = 3 speed, 4 = 4 speed, 5 = 5 speed, 6 = 6 speed, A - Automatic

Name	TransmissionType

Base XSD Type: string

Code Value	Description
3	3 Speed
4	4 Speed
5	5 Speed
6	6 Speed
A	"A" = Automatic
Automatic 3	Automatic 3 speed transmission type
Automatic 4	Automatic 4 speed transmission type

Code Value	Description
Automatic 5	Automatic 5 speed transmission type
Automatic 6	Automatic 6 speed transmission type
Automatic 7	Automatic 7 speed transmission type
7	7 Speed
CVT Automatic 3	Continuously Variable T ransmission Automatic 3 speed transmission type (natural gas and hybrid).
CVT Automatic 4	Continuously Variable T ransmission Automatic 4 speed transmission type (natural gas and hybrid).
CVT Automatic 5	Continuously Variable T ransmission Automatic 5 speed transmission type (natural gas and hybrid).
CVT Automatic 6	Continuously Variable T ransmission Automatic 6 speed transmission type (natural gas and hybrid).
CVT Automatic 7	Continuously Variable T ransmission Automatic 7 speed transmission type (natural gas and hybrid).
M	M = Manual

Type

Type

Name	Type
* Base XSD Type: string	

URI

These field(s) use this type: **URI,SenderURI,DestinationURI.**

URI

Name	URI
* Base XSD Type: anyURI	

VDSCode

These field(s) use this type: **VDSCode.**

Vehicle Description Section- part of the VIN that correlates to a specific vehicle model, bodystyle, and grade

Name	VDSCode
* Base XSD Type: string	

VehicleApplicable

These field(s) use this type: **VehicleApplicable,VehicleApplicable,VehicleApplicable.**

Indicates whether this applies to a vehicle as built or equipped.

Name	VehicleApplicable
* Base XSD Type: string	

VehicleRestricted

These field(s) use this type: **VehicleRestricted,VehicleRestricted,VehicleRestricted.**

Indicates whether restricted for a vehicle.

Name	VehicleRestricted
* Base XSD Type: string	

VIN

These field(s) use this type: **VIN.**

Federally defined 17 position vehicle identification number

Name	VIN

* Base XSD Type: string

WarrantyTypeCode

These field(s) use this type: **WarrantyTypeCode.**

A code used to classify into coverage categories.

Name	WarrantyTypeCode

* Base XSD Type: string

WMICode

These field(s) use this type: **WMICode.**

World Manufacture Identifier - part of the VIN that describes the vehicle's country of origin

Name	WMICode

* Base XSD Type: string

Year

Year

Name	Year

* Base XSD Type: gYear

Fields and Global Attributes

Global declarations are items such as elements, attribute groups, and group definitions. These items are not defined within any particular component. A component may reference these definitions. Within a STAR XML Schemas these are typically known as global fields.

ApplicationArea

These field(s) use this type: **ApplicationArea.**

Provides the information that an application may need to know in order to communicate in an integration of two or more business applications. The ApplicationArea is used at the applications layer of communication. While the integration frameworks web services and middleware provide the communication layer that OAGIS operates on top of.

Provides the information that an application may need to know in order to communicate in an integration of two or more business applications. The ApplicationArea is used at the applications layer of communication. While the integration frameworks web services and middleware provide the communication layer that OAGIS operates on top of.

Get

These field(s) use this type: **Get.**

Get Labor Operations

The Get verb is to communicate to a business software component a request for an existing piece of information to be returned. The Get may be paired with most of the nouns defined in the OAGIS specification.The response to this request is the Show verb. The behavior of a BOD with a Get verb is quite predictable across most of the nouns it may be paired with.The Get is designed to retrieve a single piece of information by using that information's primary retrieval field, or key field. The Get verb is not used to request several documents at once. The GetList verb is designed to achieve that purpose and will be covered in more detail later.Selection Criteria:There are two types of selection capabilities for most BOD's that use the Get verb.1) The first selection capability is called Field-Based Selection. Within a Get-based Business Object Document, the first Data Type that occurs in a specific BOD structure is commonly used to provide the Field-Based Selection criteria. This is always defined within the specific BOD and is commonly the required fields for that specific Data type.The Field-Based Selection enables the requester to provide a value or values (in the case of multiple required Field Identifiers), in the required fields. Then the responding component uses those values to find and return the requested information to the originating business software component.2) The second type of selection capability for Get-based BODs is called Data Type Selection. Data Type selection enables the requester to identify which Data Types within the noun are requested to be returned in the response. The use of this capability is described for each corresponding Data Type for all BODs that use the Get verb. The Data Types are identified for retrieval within the Get instance of a BOD by including the name of the Data Type in the meta data but without any Field Identifiers or Segments identified within the Data Type. This will signify to the responding application that all of the data that corresponds to that Data Type is to be included in the response.If the Data Type is not requested, the Data Type identifier is not included in the Get request and this will signify to the responding component that the Data Type is not to be returned.
