## Show Parts Invoice

---

### Show Parts Invoice Guidelines

## Overview

This document is a guideline on how to use the Show Parts Invoice Business Object Document (BOD). Show Parts Invoice has been defined in the context of STAR for the Automotive Retail Industry. The scope of this BOD is to define the Show Parts Invoice process for individual consumers who service their automobiles through their OEM's authorized Dealers. The focus is on Dealer and OEM interactions, not third party organizations. NOTE: Although this is the traditional use of the Show Parts Invoice, this BOD could be used to send Show Parts Invoice information between any two business parties.

Implementation Guidelines provide detailed information regarding the structure and meaning of the Show Parts Invoice BOD and corresponds directly to the Show Parts Invoice schema. In addition to structure and meaning, the Implementation Guidelines identify various business rules for specific fields/components that due to their nature, i.e. field interdependence, are not possible to express using schema. Please note that although these business rules are not included in the schema, they **MUST** be followed to be STAR Compliant. Therefore, the Show Parts Invoice Implementation Guidelines must be used in concert with the Show Parts Invoice schema during development and should **NOT** be considered a supplement or substitution to the schema. For more information regarding STAR XML Data Compliance, please review the STAR Data Compliance Guidelines document located on the STAR Web site.

For a copy of the corresponding Show Parts Invoice schema, please download the appropriate STAR schema repository from the XML portion of the STAR website ([www.starstandard.org](http://www.starstandard.org)). Prior to downloading the schema, users are encouraged to download the STAR XML Reference/Implementation document also located on the XML portion of the STAR website. This document provides an overview of the STAR BOD development methodology, how to download and read STAR schema, and various frequently asked questions related to the implementation of STAR BODs.

STAR has followed the Open Application Group's Business Object Document methodology to develop the Show Parts Invoice BOD. Where possible, STAR has mapped to existing OAGI fields and components. Note however that the STAR Show Parts Invoice BOD is unique to the Retail Automotive industry and is not an extension of any existing OAGIS BODs.

For more information on the Open Applications Group's BODs and related documentation please refer to the Open Applications Group's Web site at ([www.openapplications.org](http://www.openapplications.org)).

## Schema Field Usage

STAR uses the same Noun in the schema for all the Noun/Verb combinations of the Show Parts Invoice except the Get verb. Please refer to each Noun/Verb combination within this document to understand the requirements for each specific BOD. Although the Noun will always have every field defined for the Noun in the schema, each Noun/Verb combination may not use all of the fields. If a field is not used by a BOD, it will be noted in the business rules.

## Business Scenario

## Show Parts Invoice

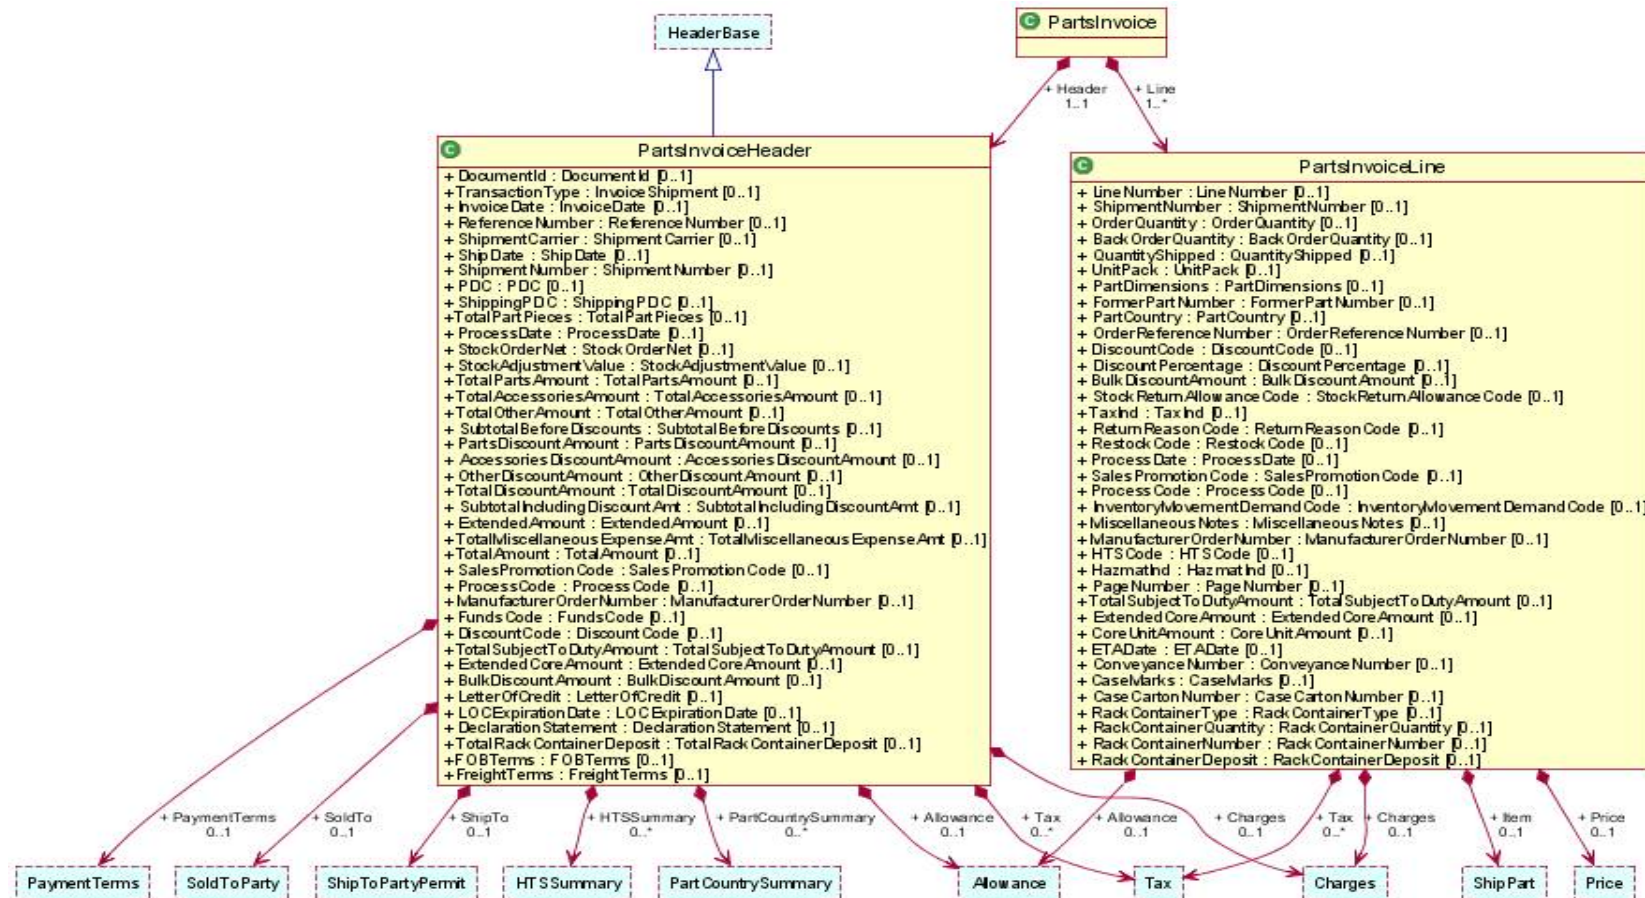

---

The Parts Invoice Binary Collaboration is a request of a Parts Invoice by the Dealer to the OEM. (i.e., the OEM sends a Parts Invoice (Process Parts Invoice) BOD to the Dealer.) Note: This scenario is an example of how the Parts Invoice BOD can be used. Implementations may vary.

## Show Parts Invoice

### Relationship Diagram

The following is a representation of the Noun for this BOD. It is a high level overview provided to give an idea of the hierarchy of the Noun's components.

### Schema Document Properties

#### Declared Namespaces

A schema can contain more than one namespace. According to Whatis.com, "In general, a namespace uniquely identifies a set of names so that there is no ambiguity when objects having different origins but the same names are mixed together." An example would be two namespaces that both defined an element called ID, without a namespace it would be impossible to determine which definition was being used.

Prefix	Namespace
<b>Default namespace</b>	<a href="http://www.starstandards.org/STAR">http://www.starstandards.org/STAR</a>
<b>xml</b>	<a href="http://www.w3.org/XML/1998/namespace">http://www.w3.org/XML/1998/namespace</a>
<b>xsd</b>	<a href="http://www.w3.org/2001/XMLSchema">http://www.w3.org/2001/XMLSchema</a>

### Components and Data Types

Global definitions include components, code lists, and data types. Components are used to build the data structures that make up a Noun and it's requirements. Data types specify the type of data that a component's fields may contain. Not all definitions are included in this documentation. Please see either the STAR Code List guideline or Data Type Guidelines for further information.

#### AccessoriesDiscountAmount

These field(s) use this type: **AccessoriesDiscountAmount.**

Discount Amount for accessories only

<b>Name</b>	<b>AccessoriesDiscountAmount</b>
<b>Abstract</b>	no

#### XML Instance Representation

```
<...  
currency="Currency [1]">  
  Amount  
</...>
```

#### AccountId

These field(s) use this type: **AccountId.**

Identifies an account number or similary identifier.

<b>Name</b>	<b>AccountId</b>
<b>Abstract</b>	no

#### XML Instance Representation

```
<...>  
  Id  
</...>
```

## Show Parts Invoice

### AddressBase

Name	AddressBase
Abstract	no

### Data Elements and Components

Field / Component	Description	R/O	Business Rule
AddressLine	Indicates the multiple lines of an address. The first line is typically the street name and number.	R	
City	Is the City of the Address.	R	
County	County in which the Address is in.	O	
StateOrProvince	Is the State or Province of a given Address.	R	
Country	Country in which the Address is in.	R	
PostalCode	Postal Code of the Address.	R	

### XML Instance Representation

```
<...>
  <AddressLine> AddressLine </AddressLine> [1..*]
  <City> City </City> [1]
  <County> County </County> [0..1]
  <StateOrProvince> StateOrProvince </StateOrProvince> [1]
  <Country> Country </Country> [1]
  <PostalCode> PostalCode </PostalCode> [1]
</...>
```

### Allowance

These field(s) use this type: Allowance,Allowance.

Name	Allowance
------	-----------

## Show Parts Invoice

**Abstract** no

### Data Elements and Components

Field / Component	Description	R/O	Business Rule
CoOpDollarsAmount	A monetary voucher given back to a dealer for purchasing parts that can be used only for advertising expenses	O	
AllowancesLostDiscounts	Allowed amount for lost discounts	O	
MonthlyReturnAmount	A monthly monetary voucher given back to a dealer for parts that have been returned.	O	
SpecialAllowanceAmount	Special allowance amounts generated by this invoice.	O	

### XML Instance Representation

```
<...>
  <CoOpDollarsAmount> CoOpDollarsAmount </CoOpDollarsAmount> [0..1]
  <AllowancesLostDiscounts> AllowancesLostDiscounts </AllowancesLostDiscounts> [0..1]
  <MonthlyReturnAmount> MonthlyReturnAmount </MonthlyReturnAmount> [0..1]
  <SpecialAllowanceAmount> SpecialAllowanceAmount </SpecialAllowanceAmount> [0..1]
</...>
```

### AllowancesLostDiscounts

These field(s) use this type: AllowancesLostDiscounts.

Allowed amount for lost discounts

**Name** AllowancesLostDiscounts

**Abstract** no

### XML Instance Representation

```
<...
currency="Currency [1]">
  Amount
</...>
```

## Show Parts Invoice

### AlternatePartyId

<b>Name</b>	AlternatePartyId
<b>Abstract</b>	no

#### Data Elements and Components

Field / Component	Description	R/O	Business Rule
Id	Alternate Party Identification	R	

#### XML Instance Representation

```
<...>  
  <Id> Id </Id> [1]  
</...>
```

### Amount

Based on OAGI Amount. Simple content with the currency as an attribute

<b>Name</b>	Amount
<b>Abstract</b>	no

#### Attributes

Field / Component	Description	R/O	Business Rule
currency		R	

#### XML Instance Representation

```
<...  
currency="Currency [1]">  
  xsd:decimal  
</...>
```

## Show Parts Invoice

### ApplicationArea

These field(s) use this type: ApplicationArea.

Name	ApplicationArea
Abstract	no

### Data Elements and Components

Field / Component	Description	R/O	Business Rule
Sender	Identifies characteristics and control identifiers that relate to the application that created the Business Object Document. The sender area can indicate the logical location of the application and/or database server, the application, and the task that was processing to create the BOD.	R	
CreationDateTime	is the date time stamp that the given instance of the Business Object Document was created. This date must not be modified during the life of the Business Object Document.	R	
Signature	If the BOD is to be signed the signature element is included, otherwise it is not. Signature supports any digital signature that maybe used by an implementation of OAGIS. The qualifyingAgency identifies the agency that provided the format for the signature. This element supports any digital signature specification that is available today and in the future. This is accomplished by not actually defining the content but by allowing the implementation to specify the digital signature to be used via an external XML Schema namespace declaration. The Signature element is defined to have any content from any other namespace. This allows the user to carry a digital signature in the xml instance of a BOD. The choice of which digital signature to use is left up to the user and their integration needs.	O	

## Show Parts Invoice

Field / Component	Description	R/O	Business Rule
BODId	The BODId provides a place to carry a Globally Unique Identifier (GUID) that will make each Business Object Document instance uniquely identifiable. This is a critical success factor to enable software developers to use the Globally Unique Identifier (GUID) to build the following services or capabilities: 1. Legally binding transactions, 2. Transaction logging, 3. Exception handling, 4. Re-sending, 5. Reporting, 6. Confirmations, 7. Security.	O	
Destination	Information related to the receiver of the BOD	R	

### XML Instance Representation

```
<...>
  <Sender> Sender </Sender> [1]
  <CreationDateTime> DateTime </CreationDateTime> [1]
  <Signature> Signature </Signature> [0..1]
  <BODId> Code </BODId> [0..1]
  <Destination> Destination </Destination> [1]
</...>
```

### Authorization

These field(s) use this type: **Authorization**.

<b>Name</b>	<b>Authorization</b>
<b>Abstract</b>	<b>no</b>

### Data Elements and Components

Field / Component	Description	R/O	Business Rule
AuthorizationDateTime	The date and time the payment authoirzation was completed.	O	
AuthorizedAmount	The amount of authorized payment	O	
AuthorizationNumber	The authorization number returned by the credit card processing company.	O	

## Show Parts Invoice

Field / Component	Description	R/O	Business Rule
CreditCardTransactionNumber	Number of transaction related to credit card processing company.	O	
AddressVerificationCode	Code resulting from verification of address for credit card number.	O	

### XML Instance Representation

```
<...>
  <AuthorizationDateTime> AuthorizationDateTime </AuthorizationDateTime> [0..1]
  <AuthorizedAmount> AuthorizedAmount </AuthorizedAmount> [0..1]
  <AuthorizationNumber> AuthorizationNumber </AuthorizationNumber> [0..1]
  <CreditCardTransactionNumber> CreditCardTransactionNumber </CreditCardTransactionNumber> [0..1]
  <AddressVerificationCode> AddressVerificationCode </AddressVerificationCode> [0..1]
</...>
```

### AuthorizedAmount

These field(s) use this type: AuthorizedAmount.

Authorized expense limit.

<b>Name</b>	AuthorizedAmount
<b>Abstract</b>	no

### XML Instance Representation

```
<...
currency="Currency [1]">
  Amount
</...>
```

### BackOrderQuantity

These field(s) use this type: BackOrderQuantity.

Quantity of part on back order

<b>Name</b>	BackOrderQuantity
-------------	-------------------

## Show Parts Invoice

---

<b>Abstract</b>	no
-----------------	----

</...>
```

### BusinessObjectDocument

<b>Name</b>	<b>BusinessObjectDocument</b>
<b>Abstract</b>	no

### Attributes

## Show Parts Invoice

Field / Component	Description	R/O	Business Rule
revision	This should contain the STAR repository version in the following recommended format. 4.2.1_M20080416. Where the first part indicates the version of the STAR repository and anything after the _ indicates the Milestone build that is being used. If referring to an official published version then only the STAR Repository version is required.	O	
release	Indicates the OAGIS release that this BOD belongs.	O	
environment	Indicates whether this BOD is being sent in a "Test" or a "Production" mode. If the BOD is being sent in a test mode, it's information should not affect the business operation. However, if the BOD is sent in "Production" mode it is assumed that all test has been complete and the contents of the BOD are to affect the operation of the receiving business application(s).	O	
lang	Indicates the language that the contents of the BOD is in unless otherwise stated.	O	
bodVersion	Deprecated as of STAR 4.2.2. It is recommended to use the revision attribute to identify the repository and the noun. May be removed in a new major version of the STAR repository. Indicates the version number of the BOD.	O	

### Data Elements and Components

Field / Component	Description	R/O	Business Rule
ApplicationArea	Provides the information that an application may need to know in order to communicate in an integration of two or more business applications. The ApplicationArea is used at the applications layer of communication. While the integration frameworks web services and middleware provide the communication layer that OAGIS operates on top of. Provides the information that an application may need to know in order to communicate in an integration of two or more business applications. The ApplicationArea is used at the applications layer of communication. While the integration frameworks web services and middleware provide the communication layer that OAGIS operates on top of.	R

### Data Elements and Components

## Show Parts Invoice

Field / Component	Description	R/O	Business Rule
DestinationNameCode	Code for destination of file (i.e.Short Manufacturer or DSP code)	O	
DestinationURI	Physical address of the destination	O	
DestinationSoftwareCode	Additional information about the destination application	O	
DestinationSoftware	For which software destination file is intended (may not be known).	O	
DealerNumber	Target Dealer Code receiving information	O	
StoreNumber	Dealer code store number (DMS assigned)	O	
AreaNumber	Dealer code area number (DMS vendor assigned)	O	
DealerCountry	Target Dealer country location	O	
PartyId	The Party Id field uniquely identifies the Receiver of the message. This element can be used for parties within the Automotive Community as well as external parties. Party Id is not intended as a replacement for the Dealer Number. Suggested formats for OEMs or other large institutions include: DUNs Number, ShortMfgCode + DUNs, or ShortMfgCode. The suggested format for Dealers is: ShortMfgCode+Dealer Number.	O	
LocationId	The Location Id field uniquely identifies the location of the Receiver of a message. This Id may be aligned with a physical address or data centers. This field provides an additional level of granularity beyond the usage of the Party Id for additional routing and deliver of data.	O	
ServiceId	The Service Id field identifies the particular service to which a message is being sent, e.g., an inventory service.	O

### Data Elements and Components

Field / Component	Description	R/O	Business Rule
LogicalId	Provides the logical location of the server and applications from which the Business Object Document originated. It can be used to establish a logical to physical mapping, however its use is optional. Each system or combination of systems should maintain an external central reference table containing the logical names or logical addresses of the application systems in the integration configuration. This enables the logical names to be mapped to the physical network addresses of the resources needed on the network. Note: The technical implementation of this Domain Naming Service is not dictated by this specification. This logical to physical mapping may be done at execution time by the application itself or by a middleware transport mechanism, depending on the integration architecture used. This provides for a simple but effective directory access capability while maintaining application independence from the physical location of those resources on the network	O	
Component	Provides a finer level of control than Logical Identifier and represents the business application that issued the Business Object Document. Its use is optional. For STAR's use this is the DCS Software code name		
Task	Describes the business event that initiated the need for the Business Object Document to be created. For STAR, the task is defined in the Implementation Guidelines for each BOD. It is usually a short description of the BOD. Ex: SalesLead, CreditDecision, etc.	R	
ReferenceId	Enables the sending application to indicate the instance identifier of the event or task that caused the BOD to be created. This is used to correlate a response BOD to an originating BOD	O	
AuthorizationId	Identifies the authorization level of the user or application that is sending the Business Object Document Message. This authorization level being recognized by the receiving system indicates what can be done on the receiving system. For STAR, this is the User ID.	O	
CreatorNameCode	DCS Software Creator Code	R	

## Show Parts Invoice

Field / Component	Description	R/O	Business Rule
SenderNameCode	Additional information about the sending platform (i.e., Short MFG or DSP code).	R	
SenderURI	Physical address of the sender	O	
DealerNumber	Dealer Code of source of information	O	
StoreNumber	Dealer code store number (DMS assigned)	O	
AreaNumber	Dealer code area number (DMS vendor assigned)	O	
DealerCountry	Source Dealer country location	O	
Language	This code is used to define the language of the data used in this transaction	O	
DeliverPendingMailInd	Indicates if the user requests to receive pending mail that has been stored and has yet not been delivered yet. By selecting 0, the user will only receive the response for the current transaction the user is performing.	O	
Password	Token for application specific authentication. Used to authenticate dealership/users through application specific security	O	
SystemVersion	The sender's software version number.	O	
PartyId	The Party Id field uniquely identifies the Sender of the message. This element can be used for parties within the Automotive Community as well as external parties. Party Id is not intended as a replacement for the Dealer Number. Suggested formats for OEMs or other large institutions include: DUNs Number, ShortMfgCode + DUNs, or ShortMfgCode. The suggested format for Dealers is: ShortMfgCode+Dealer Number.	O	
LocationId	The Location Id field uniquely identifies the location of the Sender of a message. This Id may be aligned with a physical address or data centers. This field provides an additional level of granularity beyond the usage of the Party Id for additional routing and deliver of data.	O	
ServiceId	The Service Id field identifies the particular service from which a message is being sent, e.g., an inventory service.	O

### Data Elements and Components

Field / Component	Description	R/O	Business Rule
Show	The Show verb is used when sending the information about a specific instance of a business document or entity. The Show verb may be used to respond to a Get request or it can be used in a publish scenario, where it pushes information to other applications based on a business event. Although BODs based on this verb do not commonly cause updates to occur, there may be times when the component receiving the Show decides to use the information it receives to update. This is entirely the decision of the receiving software component and is not forbidden. The behavior of the Show verb is quite straight forward with one exception. The Show response to any Get request needs to read the request carefully to ensure the response is returning the requested Data Types.	R

### AccountingDate

Month and year accounting date conforms to ISO 8601 format rules Ex: \d\d\d\d-\d\d

Name	AccountingDate
------	----------------

\*Base XSD Type: gYearMonth

### AddressLine

These field(s) use this type: AddressLine.

Indicates the multiple lines of an address. The first line is typically the street name and number.

Name	AddressLine
------	-------------

\*Base XSD Type: string

### AddressVerificationCode

These field(s) use this type: AddressVerificationCode.

Code resulting from verification of address to credit card number.

Name	AddressVerificationCode
------	-------------------------

\*Base XSD Type: string

### AssigningOrganizationPartyId

These field(s) use this type: AssigningPartyId.

Assigning Organization Party Id

Name	AssigningOrganizationPartyId
------	------------------------------

\*Base XSD Type: string

## Show Parts Invoice

Code Value	Description
LegalId	Legal ID
NationalId	Government-assigned ID such as a social security Number
Other	Other
DUNS	Dun and Bradstreet
MotorDealerRegistrationId	Department of Motor Vehicle Registration number for a dealer. This is the dealer's license number to do business.
GSTRegistrationId	Canadian Goods and Services Tax Id.
HSTRegistrationId	Canadian HarmonizedTax Id.
Certification Of Registration Id	Id of the certificate of registration assigned to a business to allow that business to collect and remit certain taxes or fees to a state.
QSTRegistrationId	Quebec sales tax id.

## AuthorizationDateTime

These field(s) use this type: **AuthorizationDateTime**.

The date and time the auhtorization was completed.

<b>Name</b>	<b>AuthorizationDateTime</b>
-------------	------------------------------

\*Base XSD Type: dateTime

## AuthorizationNumber

These field(s) use this type: **AuthorizationNumber**.

Authorization Number

<b>Name</b>	<b>AuthorizationNumber</b>
-------------	----------------------------

\*Base XSD Type: string

## Show Parts Invoice

### LetterOfCredit

These field(s) use this type: LetterOfCredit.

Letter Of Credit

Name	LetterOfCredit
------	----------------

\*Base XSD Type: string

### LicenseExpirationDate

These field(s) use this type: LicenseExpirationDate.

Expiration date of license

Name	LicenseExpirationDate
------	-----------------------

\*Base XSD Type: date

### LineNumber

These field(s) use this type: LineNumber.

The number of the given Line Component within the document. LineNumbers are assigned by the sending system.

Name	LineNumber
------	------------

\*Base XSD Type: string

### LOCExpirationDate

These field(s) use this type: LOCExpirationDate.

LOC Expiration Date

Name	LOCExpirationDate

## PartDimensions

These field(s) use this type: **PartDimensions**.

## Show Parts Invoice

---

Indicates the dimensions of a part, such as the length and width of a piece of cloth or leather.

Name	PartDimensions
------	----------------

\*Base XSD Type: string

### PartType

These field(s) use this type: **PartType**.

Specifies whether the parts are indicated by manufacturer part code or Part Number - H = Manufacturer Part Code, P = Part Number

Name	PartType
------	----------

\*Base XSD Type: string

Code Value	Description
H	Manufacturer Part Code
P	"P" = Pending

### PaymentMethod

These field(s) use this type: **PaymentMethod**.

Indicates the method of payment (e.g., cash, credit card, etc.).

Name	PaymentMethod
------	---------------

\*Base XSD Type: string

Code Value	Description
Terms	Indicates that payment terms are provided.
COD	Cash On Delivery
Due On Receipt	Payment is due upon receipt of invoice.
Credit Card	Indicates that a credit card will be used as the method of payment.

## Show Parts Invoice

Code Value	Description
Check	Indicates that a check will be used as the method of payment.
EFT	Electronic funds transfer.
Payroll Deduction	Indicates that a payment will be via deduction of an individual's payroll.
Cash	Indicates that cash will be used as the method of payment.
Finance	
Other	Other
N/A	Not Applicable
Exchange	Indicates the dealers intent to return parts in exchange for the monetary value of the order.

### PaymentTermsDate

These field(s) use this type: **PaymentTermsDate**.

The date and time the payment terms go into effect.

Name	PaymentTermsDate
------	------------------

\*Base XSD Type: date

### PayTerms

These field(s) use this type: **PayTerms**.

When payment is due and/or discounts allowed.

### Show

These field(s) use this type: **Show**.

The Show verb is used when sending the information about a specific instance of a business document or entity. The Show verb may be used to respond to a Get request or it can be used in a publish scenario, where it pushes information to other applications based on a business event. Although BODs based on this verb do not commonly cause updates to occur, there may be times when the component receiving the Show decides to use the information it receives to update. This is entirely the decision of the receiving software component and is not forbidden. The behavior of the Show verb is quite straight forward with one exception. The Show response to any Get request needs to read the request carefully to ensure the response is returning the requested Data Types.
