Get Parts Order

Get Parts Order Guidelines

Overview

This document is a guideline on how to use the Get Parts Order Business Object Document (BOD). Get Parts Order has been defined in the context of STAR for the Automotive Retail Industry. The scope of this BOD is to define the Get Parts Order process for individual consumers who service their automobiles through their OEM's authorized Dealers. The focus is on Dealer and OEM interactions, not third party organizations. NOTE: Although this is the traditional use of the Get Parts Order, this BOD could be used to send Get Parts Order information between any two business parties.

Implementation Guidelines provide detailed information regarding the structure and meaning of the Get Parts Order BOD and corresponds directly to the Get Parts Order schema. In addition to structure and meaning, the Implementation Guidelines identify various business rules for specific fields/components that due to their nature, i.e. field interdependence, are not possible to express using schema. Please note that although these business rules are not included in the schema, they **MUST** be followed to be STAR Compliant. Therefore, the Get Parts Order Implementation Guidelines must be used in concert with the Get Parts Order schema during development and should **NOT** be considered a supplement or substitution to the schema. For more information regarding STAR XML Data Compliance, please review the STAR Data Compliance Guidelines document located on the STAR Web site.

For a copy of the corresponding Get Parts Order schema, please download the appropriate STAR schema repository from the XML portion of the STAR website (www.starstandard.org). Prior to downloading the schema, users are encouraged to download the STAR XML Reference/Implementation document also located on the XML portion of the STAR website. This document provides an overview of the STAR BOD development methodology, how to download and read STAR schema, and various frequently asked questions related to the implementation of STAR BODs.

STAR has followed the Open Application Group's Business Object Document methodology to develop the Get Parts Order BOD. Where possible, STAR has mapped to existing OAGI fields and components. Note however that the STAR Get Parts Order BOD is unique to the Retail Automotive industry and is not an extension of any existing OAGIS BODs.

For more information on the Open Applications Group's BODs and related documentation please refer to the Open Applications Group's Web site at (www.openapplications.org).

Schema Field Usage

STAR uses the same Noun in the schema for all the Noun/Verb combinations of the Get Parts Order except the Get verb. Please refer to each Noun/Verb combination within this document to understand the requirements for each specific BOD. Although the Noun will always have every field defined for the Noun in the schema, each Noun/Verb combination may not use all of the fields. If a field is not used by a BOD, it will be noted in the business rules.

Business Scenario

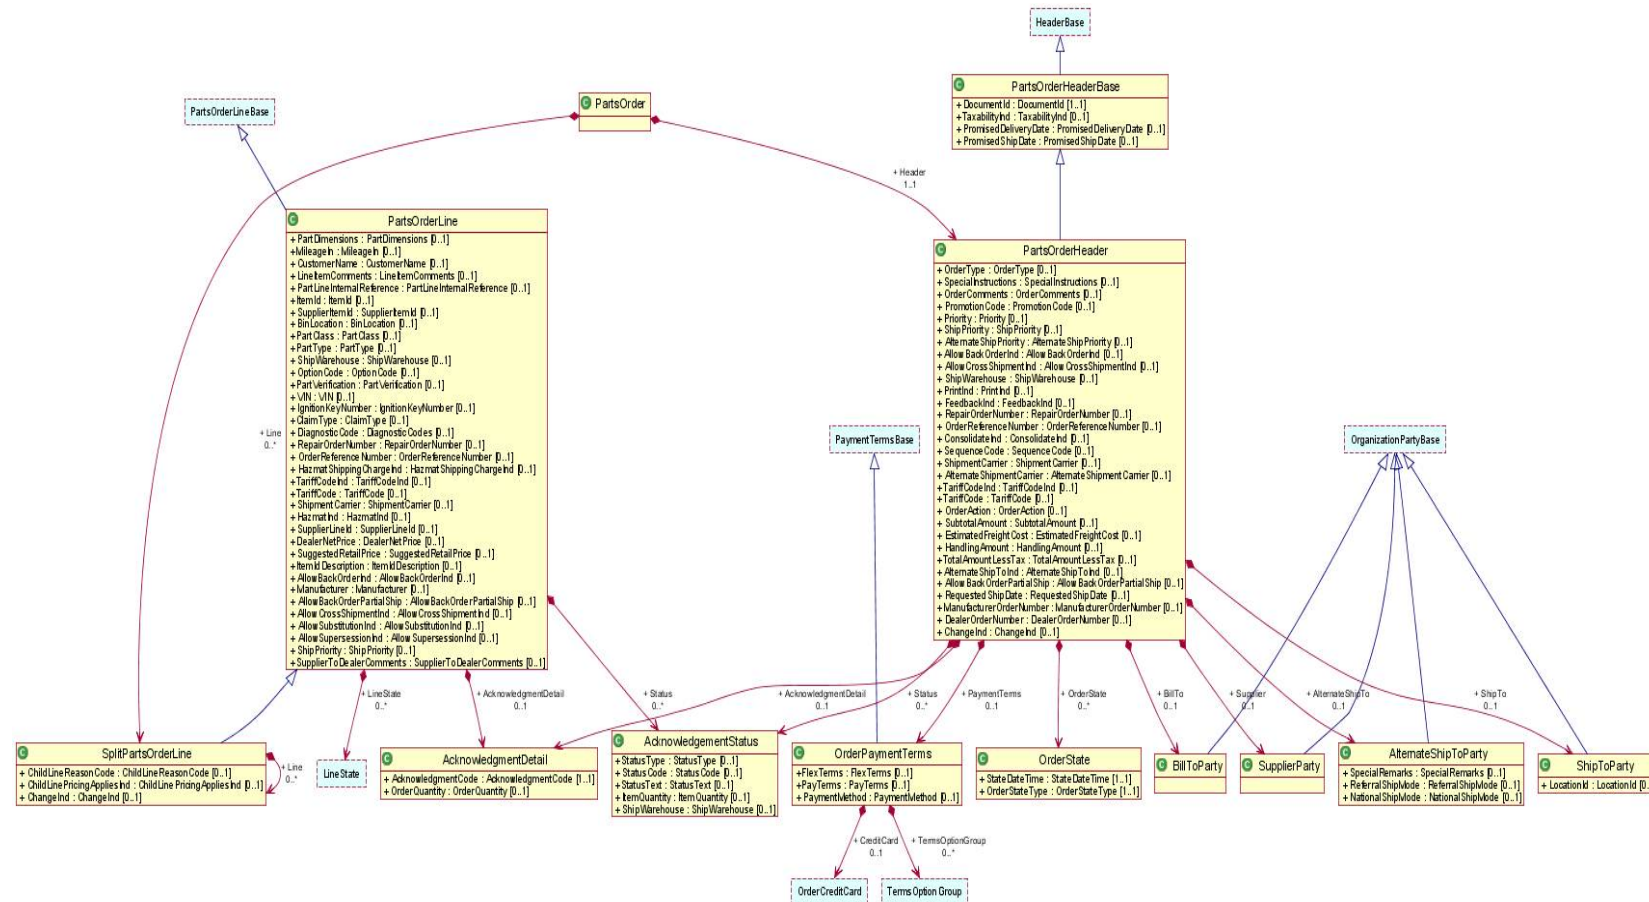

The Parts Order Binary Collaboration starts with the transmission of a Parts Order from the Dealer to the OEM. In response, the OEM may send Parts

Get Parts Order

Order information back to the Dealer acknowledging the requested parts, identifying backordered items, etc. This process occurs on demand as is needed.
Note: This scenario is an example of how the Parts Return BOD can be used. Implementations may vary.

Relationship Diagram

The following is a representation of the Noun for this BOD. It is a high level overview provided to give an idea of the hierarchy of the Noun's components.

Schema Document Properties

Declared Namespaces

A schema can contain more than one namespace. According to Whatis.com, "In general, a namespace uniquely identifies a set of names so that there is no ambiguity when objects having different origins but the same names are mixed together." An example would be two namespaces that both defined an element called ID, without a namespace it would be impossible to determine which definition was being used.

Prefix	Namespace
Default namespace	http://www.starstandards.org/STAR
xml	http://www.w3.org/XML/1998/namespace
xsd	http://www.w3.org/2001/XMLSchema

Components and Data Types

Global definitions include components, code lists, and data types. Components are used to build the data structures that make up a Noun and it's requirements. Data types specify the type of data that a component's fields may contain. Not all definitions are included in this documentation. Please see either the STAR Code List guideline or Data Type Guidelines for further information.

AccountId

These field(s) use this type: **AccountId**.

Identifies an account number or similary identifier.

Name	AccountId
Abstract	no

XML Instance Representation

```
<...>  
  Id  
</...>
```

AcknowledgementStatus

These field(s) use this type: **Status,Status**.

Name	AcknowledgementStatus
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
StatusType	Defines the type of status that occurred. EX: S-Success, E-Error, W-Warning, I-Info, A-Abort	O	
StatusCode	A code identifying the reason for the status message.	O	

Get Parts Order

Field / Component	Description	R/O	Business Rule
StatusText	Descriptive status text.	O	
ItemQuantity	Quantity of the part that has the specified status.	O	
ShipWarehouse	Line item warehouse override code. Indicates which warehouse or distribution center to ship part form.	O	

XML Instance Representation

```
<...>
  <StatusType> StatusType </StatusType> [0..1]
  <StatusCode> StatusCode </StatusCode> [0..1]
  <StatusText> StatusText </StatusText> [0..1]
  <ItemQuantity> ItemQuantity </ItemQuantity> [0..1]
  <ShipWarehouse> ShipWarehouse </ShipWarehouse> [0..1]
</...>
```

AcknowledgmentDetail

These field(s) use this type: AcknowledgmentDetail,AcknowledgmentDetail.

Name	AcknowledgmentDetail
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
AcknowledgmentCode	Represents a list of codes that specify status values for the acknowledgment.	R	
OrderQuantity	Indicates the number of ordered items. Calculated based upon pack multipliers.	O	

XML Instance Representation

```
<...>
  <AcknowledgmentCode> AcknowledgmentCode </AcknowledgmentCode> [1]
</...>
```

Get Parts Order

```
<OrderQuantity> OrderQuantity </OrderQuantity> [0..1]
</...>
```

AddressBase

Name	AddressBase
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
AddressLine	Indicates the multiple lines of an address. The first line is typically the street name and number.	R	
City	Is the City of the Address.	R	
County	County in which the Address is in.	O	
StateOrProvince	Is the State or Province of a given Address.	R	Reference valid value rule USPS
Country	Country in which the Address is in.	R	
PostalCode	Postal Code of the Address.	R	Reference valid value rule USPS

XML Instance Representation

```
<...>
  <AddressLine> AddressLine </AddressLine> [1..*]
  <City> City </City> [1]
  <County> County </County> [0..1]
  <StateOrProvince> StateOrProvince </StateOrProvince> [1]
  <Country> Country </Country> [1]
  <PostalCode> PostalCode </PostalCode> [1]
</...>
```

AlternatePartyId

Data Elements and Components

Field / Component	Description	R/O	Business Rule
Id	Alternate Party Identification	R	

XML Instance Representation

```
<...>  
  <Id> Id </Id> [1]  
</...>
```

AlternateShipmentCarrier

These field(s) use this type: AlternateShipmentCarrier.

Secondary carrier for delivery of part if primary not available.

Name	AlternateShipmentCarrier
Abstract	no

XML Instance Representation

```
<...>  
  ShipmentCarrier  
</...>
```

AlternateShipPriority

These field(s) use this type: AlternateShipPriority.

Alternate ship priority

Name	AlternateShipPriority
-------------	-----------------------

Get Parts Order

Abstract	no
-----------------	----

XML Instance Representation

```
<...>  
  ShipPriority  
</...>
```

AlternateShipToParty

These field(s) use this type: AlternateShipTo.

Name	AlternateShipToParty
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
PartyId	Party Identification Number	O	
AlternatePartyIds	Alternate organizational party Identification	O	This component will be optional on the condition that the PartyId has been completed. If there is no PartyId, than the AlternatePartyId component is required.
Name	Company name of organizational party	O	
Address	Organizational Party address	O	
DBAName	Doing Business As name.	O	
SpecialRemarks	Any special remarks regarding a party.	O	
ReferralShipMode	The shipping mode applied to orders shipped by the referring depot center.	O	
NationalShipMode	The shipping mode applied to orders shipped by the referring depot center.	O	

Get Parts Order

XML Instance Representation

  <ReferralShipMode> ReferralShipMode </ReferralShipMode> [0..1]
  <NationalShipMode> NationalShipMode </NationalShipMode> [0..1]
</...>
```

Amount

Based on OAGI Amount. Simple content with the currency as an attribute

Name	Amount
Abstract	no

Attributes

Field / Component	Description	R/O	Business Rule
currency		R	

XML Instance Representation

```
<...
currency="Currency [1]">
  xsd:decimal
</...>
```

ApplicationArea

These field(s) use this type: **ApplicationArea**.

Name	ApplicationArea
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
Sender	Identifies characteristics and control identifiers that relate to the application that created the Business Object Document. The sender area can indicate the logical location of the application and/or database server, the application, and the task that was processing to create the BOD.	R	
CreationDateTime	is the date time stamp that the given instance of the Business Object Document was created. This date must not be modified during the life of the Business Object Document.	R	Date/Time fields must be formatted as XML Schema DateTimes in UTC/GMT format without offsets. Example: 2003-11-05T13:15:30Z
Signature	If the BOD is to be signed the signature element is included, otherwise it is not. Signature supports any digital signature that maybe used by an implementation of OAGIS. The qualifyingAgency identifies the agency that provided the format for the signature. This element supports any digital signature specification that is available today and in the future. This is accomplished by not actually defining the content but by allowing the implementation to specify the digital signature to be used via an external XML Schema namespace declaration. The Signature element is defined to have any content from any other namespace. This allows the user to carry a digital signature in the xml instance of a BOD. The choice of which digital signature to use is left up to the user and their integration needs.	O	
BODId	The BODId provides a place to carry a Globally Unique Identifier (GUID) that will make each Business Object Document instance uniquely identifiable. This is a critical success factor to enable software developers to use the Globally Unique Identifier (GUID) to build the following services or capabilities: 1. Legally binding transactions, 2. Transaction logging, 3. Exception handling, 4. Re-sending, 5. Reporting, 6. Confirmations, 7. Security.	O	
Destination	Information related to the receiver of the BOD	R	

Get Parts Order

XML Instance Representation

```
<...>
  <Sender> Sender </Sender> [1]
  <CreationDateTime> DateTime </CreationDateTime> [1]
  <Signature> Signature </Signature> [0..1]
  <BODId> Code </BODId> [0..1]
  <Destination> Destination </Destination> [1]
</...>
```

AssignedCreditCardId

These field(s) use this type: **AssignedCreditCardId**.

This is an identifier for the credit card that has no business meaning, and is generally provided by the supplier. It is only required in cases where the dealer is requesting payment by a credit card that is already on file with the supplier.

Name	AssignedCreditCardId
Abstract	no

XML Instance Representation

```
<...>
  Id
</...>
```

Authorization

These field(s) use this type: **Authorization**.

Name	Authorization
Abstract	no

Data Elements and Components

Get Parts Order

Field / Component	Description	R/O	Business Rule
AuthorizationDateTime	The date and time the payment authorization was completed.	O	Date/Time fields must be formatted as XML Schema DateTimes in UTC/GMT format without offsets. Example: 2003-11-05T13:15:30Z
AuthorizedAmount	The amount of authorized payment	O	
AuthorizationNumber	The authorization number returned by the credit card processing company.	O	
CreditCardTransactionNumber	Number of transaction related to credit card processing company.	O	
AddressVerificationCode	Code resulting from verification of address for credit card number.	O	

XML Instance Representation

```
<...>  
  <AuthorizationDateTime> AuthorizationDateTime </AuthorizationDateTime> [0..1]  
  <AuthorizedAmount> AuthorizedAmount </AuthorizedAmount> [0..1]

Name	BusinessObjectDocument
Abstract	no

Attributes

Field / Component	Description	R/O	Business Rule
revision	This should contain the STAR repository version in the following recommended format. 4.2.1_M20080416. Where the first part indicates the version of the STAR repository and anything after the _ indicates the Milestone build that is being used. If referring to an official published version then only the STAR Repository version is required.	O	
release	Indicates the OAGIS release that this BOD belongs.	O	
environment	Indicates whether this BOD is being sent in a "Test" or a "Production" mode. If the BOD is being sent in a test mode, it's information should not affect the business operation. However, if the BOD is sent in "Production" mode it is assumed that all test has been complete and the contents of the BOD are to affect the operation of the receiving business application(s).	O	
lang	Indicates the language that the contents of the BOD is in unless otherwise stated.	O	
bodVersion	Deprecated as of STAR 4.2.2. It is recommended to use the revision attribute to identify the repository and the noun. May be removed in a new major version of the STAR repository. Indicates the version number of the BOD.	O

```

Destination

These field(s) use this type: Destination.

Name	Destination
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
DestinationNameCode	Code for destination of file (i.e.Short Manufacturer or DSP code)	O	Must use a valid code from the ShortMfg/RSP list on http://www.starstandards.org
DestinationURI	Physical address of the destination	O	
DestinationSoftwareCode	Additional information about the destination application	O	

Get Parts Order

Field / Component	Description	R/O	Business Rule
DestinationSoftware	For which software destination file is intended (may not be known).	O	
DealerNumber	Target Dealer Code receiving information	O	
StoreNumber	Dealer code store number (DMS assigned)	O	
AreaNumber	Dealer code area number (DMS vendor assigned)	O	
DealerCountry	Target Dealer country location	O	
PartyId	The Party Id field uniquely identifies the Receiver of the message. This element can be used for parties within the Automotive Community as well as external parties. Party Id is not intended as a replacement for the Dealer Number. Suggested formats for OEMs or other large institutions include: DUNs Number, ShortMfgCode + DUNs, or ShortMfgCode. The suggested format for Dealers is: ShortMfgCode+Dealer Number.	O	
LocationId	The Location Id field uniquely identifies the location of the Receiver of a message. This Id may be aligned with a physical address or data centers. This field provides an additional level of granularity beyond the usage of the Party Id for additional routing and deliver of data.		
ServiceId	The Service Id field identifies the particular service to which a message is being sent, e.g., an inventory service.	O	

XML Instance Representation

Get Parts Order

Data Elements and Components

Field / Component	Description	R/O	Business Rule
Verb		R	
ReturnCriteria	ReturnCriteria identifies the content that is to be returned, given query success. In essence, the expression here has the effect of filtering the part(s) of the found element(s) that are to be returned. ReturnCriteria plays no role in the query itself. That is handled as a match against the request BOD's noun exemplar. ReturnCriteria allows the sender of the BOD to indicate which information (down to the field level) is requested to be returned, given that the query has been successful in matching the exemplar to existing nouns. That is, in a GetListPurchaseOrder, if one or more PurchaseOrders with a TotalPrice = \$1M were found, ReturnCriteria tells the BOD recipient which parts of the PurchaseOrder should be populated with content when the response (ShowPurchaseOrder) is formulated. The expressionLanguage indicates the expression language being used. In order for the ReturnCriteria expression to be evaluable by the BOD recipient, the recipient must be capable of processing and interpreting the specified expression language. XPath is the default, due to its ubiquity among XML processing technologies.	R

Data Elements and Components

Get Parts Order

Field / Component	Description	R/O	Business Rule
Get	<p>The Get verb is to communicate to a business software component a request for an existing piece of information to be returned. The Get may be paired with most of the nouns defined in the OAGIS specification. The response to this request is the Show verb. The behavior of a BOD with a Get verb is quite predictable across most of the nouns it may be paired with. The Get is designed to retrieve a single piece of information by using that information's primary retrieval field, or key field. The Get verb is not used to request several documents at once. The GetList verb is designed to achieve that purpose and will be covered in more detail later.</p> <p>Selection Criteria: There are two types of selection capabilities for most BOD's that use the Get verb.</p> <p>1) The first selection capability is called Field-Based Selection. Within a Get-based Business Object Document, the first Data Type that occurs in a specific BOD structure is commonly used to provide the Field-Based Selection criteria. This is always defined within the specific BOD and is commonly the required fields for that specific Data type. The Field-Based Selection enables the requester to provide a value or values (in the case of multiple required Field Identifiers), in the required fields. Then the responding component uses those values to find and return the requested information to the originating business software component.</p> <p>2) The second type of selection capability for Get-based BODs is called Data Type Selection. Data Type selection enables the requester to identify which Data Types within the noun are requested to be returned in the response. The use of this capability is described for each corresponding Data Type for all BODs that use the Get verb. The Data Types are identified for retrieval within the Get instance of a BOD by including the name of the Data Type in the meta data but without any Field Identifiers or Segments identified within the Data Type. This will signify to the responding application that all of the data that corresponds to that Data Type is to be included in the response. If the Data Type is not requested, the Data Type identifier is not included in the Get request and this will signify to the responding component that the Data Type is not to be returned.</p>	R

OrderPaymentTerms

These field(s) use this type: **PaymentTerms**.

Identifies the payment terms for an Order or Invoice.

Name	OrderPaymentTerms
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
Description	A user friendly description of the Term (e.g. 10 Percent discount if payed O in 30 days)		
DueDate	The absolute due date and time.	O	
PaymentTermsDate	The date and time when the payment terms go into effect. Used in conjunction with NumberOfDays	O	
NumberOfDays	The number of days from the PaymentTermDateTime by which payment O is expected.		
FlexTerms	Indicates if the dealer wishes to apply a discount to the order, or if the dealer wishes to increase their return allowance.	O	
PayTerms	When payment is due and/or discounts allowed.	O	Example: 7 = 30-60-90 Days 4.25% Discount
PaymentMethod	Indicates the method of payment (e.g. cash, credit, etc.).	O	
CreditCard	The credit card information for the individual purchasing the item.	O	Note: If the PaymentMethod is credit, the Credit Card component is required.
TermsOptionGroup	The TermsOptionGroup component represents a set of options for the terms of the payment. Each occurrence of TermsOptionGroup is, by definition, a payment option to the other TermsOptionGroup occurrences. (Boolean OR among TermsOptionGroup occurrences)	O	(INACTIVE) Only to be used in: AcknowledgePartsOrder, ShowPartsOrder

Field / Component	Description	R/O	Business Rule
ConsolidateInd	"Indicates like order types should be consolidated to one invoice/shipment."	O	(INACTIVE) Values: 1 - Like order types should be consolidated, 0 - Like order types should not be consolidated
SequenceCode	"A pre-defined sort sequence for order consolidation, i.e., sort by part order. EX:1, 2, 3."	O	(INACTIVE)
ShipmentCarrier	"Preferred carrier of deliver of part." Deprecated. Use: ShipmentCarrierCompanyCode	O	(INACTIVE)
AlternateShipmentCarrier	"Secondary carrier for delivery of part order, if primary is not available." Deprecated. Use: ShipmentCarrierCompanyCode	O	(INACTIVE)
TariffCodeInd	"Indicator of tariff."	O	(INACTIVE) Values: 1 - Tarriff required, 0 - No tarriff required.
TariffCode	"Code identifying the tariff associated with the order/shipment."	O	(INACTIVE)
BillTo	"Represents the business party billed for the order/shipment."	O	(INACTIVE)
ShipTo	"Represents the business party receiving the shipment."	O	(INACTIVE)
Supplier	"Represents the business party supplying the order. This is ususally the auto manufacturer."	O	(INACTIVE)
AlternateShipTo	"Represents the business party receiving the shipment if the initial ShipTo party is not available."	O	(INACTIVE)
OrderAction	Identifies the action to be applied to the entire order (e.g., Ship, Cancel, Upgrade, etc.)	O	(INACTIVE)
Status	Defines the type of status message that has occurred for the entire Parts Order. This could contain informationrelated to errors that have occurred with in the Parts Order, whether or not the Parts Order was successfully validated, etc.	O	(INACTIVE) Only to be used in: AcknowledgePartsOrder

Get Parts Order

Field / Component	Description	R/O	Business Rule
SubtotalAmount	Total amount of the line items.	O	(INACTIVE)
EstimatedFreightCost	Is used to the describe the estimated cost of transporting the items or products being sold, produced or purchased. This amount is usually determined at the time the sales order is created and is quoted to the customer, before the actual shipping method, weight or number of units is known. This is also customarily known as a general Shipping and Handling charge.	O	(INACTIVE)
HandlingAmount	For urgent parts orders, the handling charge for the order.	O	(INACTIVE)
TotalAmountLessTax	Total dollar amount of the order including freight and handling charge, but excluding taxes.	O	(INACTIVE)
AlternateShipToInd	Indicates if the order can be shipped to the alternate address.	O	(INACTIVE) Values: 1 - Indicates the Order will be ship to the Alternate Address, 0 - Indicates the order will be shipped to the regular address.
OrderState	The OrderState Component represents the current and history states of the order. This component may occur many times reflecting the history of states.	O	(INACTIVE) Only to be used in: ProcessPartsOrder, AcknowledgePartsOrder, ShowPartsOrder, ChangePartsOrder
AllowBackOrderPartialShip	Identifies if th dealer is willing to accept backorders and partial shipments on the order. Clearly communicates the dealer intention for how to handle back orders and partial shipments. Note: Line Item overrides can be made. If provided at the line level for any given line it overrrides the values present at the header.	O	(INACTIVE) Only to be used in: ProcessPartsOrder, AcknowledgePartsOrder, ShowPartsOrder, ChangePartsOrder

Get Parts Order

Field / Component	Description	R/O	Business Rule
RequestedShipDate	The date the dealer is requesting the supplier to ship the order. This could be sooner or later than the typical stock order shipping date. However, it is expected this field is intended to delay the shipment from the typical stock order processing to some later preferred date.	O	(INACTIVE) YYYY-MM-DD Only to be used in: ProcessPartsOrder, AcknowledgePartsOrder, ShowPartsOrder, ChangePartsOrder
ManufacturerOrderNumber	The order number assigned to the order by the manufacture/supplier.	O	(INACTIVE) Only to be used in: AcknowledgePartsOrder, ShowPartsOrder
DealerOrderNumber	A Dealer assigned identifier for the order. i.e. The Parts Order number.	O	
ChangeInd	Used to identify if a field or sub-component have been changed.	O	(INACTIVE) Only used in the Change Parts Order BOD.
CrossShipmentRestriction	Reduce the options of the OEM when shipping and order to the Dealer.	O	
FOBTerms	Freight on Board Transit Ownership terms	O	
ShipmentCarrierDetail	The ShipmentCarrierDetail component is used to describe the shipment carrier to be used for a shipment and the method by which the shipment will be made.	O

PartsOrderLine

Name	PartsOrderLine
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
LineNumber		O	
OrderQuantity	Indicates the number of ordered items for the given line.	O	
PromisedDeliveryDate	Indicates the date in which the order was promised to be delivered to the customer.	O	
PromisedShipDate	Indicates the date in which the order was promised to be shipped from the supplier to the customer.	O	
AcknowledgmentDetail	"Represents feedback from the supplier concerning the original purchase order received. This component at the Line level will indicate whether all or specific products ordered are available."	O	
PartDimensions	"Indicates the dimensions of a part, such as the length of a piece of cloth or leather."	O	
MileageIn	"Odometer reading of vehicle when repair order was opened"	O	
CustomerName	"Free form text associated with order. May be name of customer associated with the order line or special order information."	O	

Get Parts Order

Field / Component	Description	R/O	Business Rule
LineItemComments	"Free form text for dealer per line item or part order for comments or additional part information."	O	
PartLineInternalReference	"Internal DMS tracking information. Used to indicate relationships between internal DMS data and the part line information being sent to manufacturer."	O	
ItemId	"Item part number."	O	
SupplierItemId	"Supplier identification of part on order."	O	
BinLocation	"Dealer specific location of part."	O	
PartClass	"Gifts, literature, keys, regular parts Inventory Class code (if any) used in O DMS system."	O	
PartType	"Specifies whether the parts are indicated by manufacturer part code or Part Number"	O	
ShipWarehouse	"Warehouse override code. Indicates which warehouse or distribution center to ship from." Deprecated. Use: OriginatingWarehouse	O	
OptionCode	"Dealer processing preference to designate priority override by line item."	O	
PartVerification	"Indicates that the dealer is assuring the manufacturer that the line entry is correct (e.g., for unusually large quantity)."	O	
VIN	"Federally defined 17 position vehicle identification number."	O	
IgnitionKeyNumber	"Vehicle ignition key number."	O	
ClaimType	"Customer claim type, i.e., customer pay vs. warranty."	O	
DiagnosticCode	"A 3-digit complaint code for parts under warranty."	O	
RepairOrderNumber	"Identification number of repair order assigned by dealer or DMS."	O	
OrderReferenceNumber	"Original order number for line item."	O	
HazmatShippingChargeInd	"Indicates whether this Hazardous Material part will incur an additional shipping charge."	O	

Get Parts Order

Field / Component	Description	R/O	Business Rule
TariffCodeInd	"Indicator of tariff."	O	
TariffCode	"Code identifying the tariff associated with the order/shipment."	O	
ShipmentCarrier	"Preferred carrier of deliver of part." Deprecated. Use: ShipmentCarrierCompanyCode	O	
HazmatInd	"Indicates whether this part the dealer is ordering is considered a hazardous material (e.g., air bag)."	O	
SupplierLineId	Supplier-assigned line code for an established manufacturer to uniquely identify a part within a supplier's warehouse system.	O	
Status	Defines the type of status message that has occurred for the individual Part Order Line Item. This could contain information related to errors associated iwth invalid part numbers, etc.	O	
DealerNetPrice	Dealer net price of the individual part for the quantity indicated.	O	
SuggestedRetailPrice	Suggested retail price of the individual part for the quantity indicated.	O	
ItemIdDescription	Item part number detail description.	O	
AllowBackOrderInd	"Partial shipments permission."	O	
LineState	The LineState component represents the current and history states of the order line. This component may occur many times reflecting the history of states.	O	
Manufacturer	This is the name of the OEM who manufactured the part. This is the full noun name, not a code.	O	
AllowBackOrderPartialShip	Identifies if the dealer is willing to accept backorders and partial shipments on the order. Clearly communicates the deal intention for how to handle back orders and partial shipments. Note: Line item overrides can be made. If provided at the line level for any given line it overrides the values present at the header.	O	
AllowCrossShipmentInd	Permission indicator for multiple shipment sources. Note: Line item overrides can be made. If provided at the line level for any given line it overrides the values present at the header.	O	

Get Parts Order

Field / Component	Description	R/O	Business Rule
AllowSubstitutionInd	Indicates if the dealer allows a substituted part.	O	
AllowSupersessionInd	Indicates if the dealer allows a superseded part.	O	
ShipPriority	Defines two conceptsL The shipping method (e.g. ground or air) and the ship duration (how fast the customer wants the order to be delivered). ShipPriority applies to all warehouses items can be shipped from, unless the supplier accepts an AlternateShipPriority. If the supplier accpets AlternateShipPriority, then ShipPriority applies only to the facing warehouse fro the dealer. A facing warehous is the default, usually the most geographically close, warehouse for the dealer. Deprecated. Use:ShipCarrierTransMethodTypeCode	O	
SupplierToDealerComments	Enables a Supplier to send comments to the dealer without disturbing dealer line comments. Otherwise, the supplier will have to either overwrite or append Supplier related comments to Dealer comments.	O

RequestVerb

Name	RequestVerb
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
Verb		R	
ReturnCriteria	ReturnCriteria identifies the content that is to be returned, given query success. In essence, the expression here has the effect of filtering the part(s) of the found element(s) that are to be returned. ReturnCriteria plays no role in the query itself. That is handled as a match against the request BOD's noun exemplar. ReturnCriteria allows the sender of the BOD to indicate which information (down to the field level) is requested to be returned, given that the query has been successful in matching the exemplar to existing nouns. That is, in a GetListPurchaseOrder, if one or more PurchaseOrders with a TotalPrice = \$1M were found, ReturnCriteria tells the BOD recipient which parts of the PurchaseOrder should be populated with content when the response (ShowPurchaseOrder) is formulated. The expressionLanguage indicates the expression language being used. In order for the ReturnCriteria expression to be evaluable by the BOD recipient, the recipient must be capable of processing and interpreting the specified expression language. XPath is the default, due to its ubiquity among XML processing technologies.	R

Sender

These field(s) use this type: Sender.

Name	Sender
Abstract	no

Data Elements and Components

Get Parts Order

Field / Component	Description	R/O	Business Rule
LogicalId	Provides the logical location of the server and applications from which the Business Object Document originated. It can be used to establish a logical to physical mapping, however its use is optional. Each system or combination of systems should maintain an external central reference table containing the logical names or logical addresses of the application systems in the integration configuration. This enables the logical names to be mapped to the physical network addresses of the resources needed on the network. Note: The technical implementation of this Domain Naming Service is not dictated by this specification. This logical to physical mapping may be done at execution time by the application itself or by a middleware transport mechanism, depending on the integration architecture used. This provides for a simple but effective directory access capability while maintaining application independence from the physical location of those resources on the network	O	
Component	Provides a finer level of control than Logical Identifier and represents the business application that issued the Business Object Document. Its use is optional. For STAR's use this is the DCS Software code name		
Task	Describes the business event that initiated the need for the Business Object Document to be created. For STAR, the task is defined in the Implementation Guidelines for each BOD. It is usually a short description of the BOD. Ex: SalesLead, CreditDecision, etc.	R	
ReferenceId	Enables the sending application to indicate the instance identifier of the event or task that caused the BOD to be created. This is used to correlate a response BOD to an originating BOD	O	
AuthorizationId	Identifies the authorization level of the user or application that is sending the Business Object Document Message. This authorization level being recognized by the receiving system indicates what can be done on the receiving system. For STAR, this is the User ID.	O	
CreatorNameCode	DCS Software Creator Code	R	
SenderNameCode	Additional information about the sending platform (i.e., Short MFG or DSP code).	R	Must use a valid code from the ShortMfg/RSP list on http://www.starstandards.org
SenderURI	Physical address of the sender	O	

Get Parts Order

Field / Component	Description	R/O	Business Rule
DealerNumber	Dealer Code of source of information	O	
StoreNumber	Dealer code store number (DMS assigned)	O	
AreaNumber	Dealer code area number (DMS vendor assigned)	O	
DealerCountry	Source Dealer country location	O	
Language	This code is used to define the language of the data used in this transaction	O	
DeliverPendingMailInd	Indicates if the user requests to receive pending mail that has been stored and has yet not been delivered yet. By selecting 0, the user will only receive the response for the current transaction the user is performing.	O	
Password	Token for application specific authentication. Used to authenticate dealership/users through application specific security	O	
SystemVersion	The sender's software version number.	O	
PartyId	The Party Id field uniquely identifies the Sender of the message. This element can be used for parties within the Automotive Community as well as external parties. Party Id is not intended as a replacement for the Dealer Number. Suggested formats for OEMs or other large institutions include: DUNs Number, ShortMfgCode + DUNs, or ShortMfgCode. The suggested format for Dealers is: ShortMfgCode+Dealer Number.	O	
LocationId	The Location Id field uniquely identifies the location of the Sender of a message. This Id may be aligned with a physical address or data centers. This field provides an additional level of granularity beyond the usage of the Party Id for additional routing and deliver of data.	O	
ServiceId	The Service Id field identifies the particular service from which a message is being sent, e.g., an inventory service.	O

HazmatInd	"Indicates whether this part the dealer is ordering is considered a hazardous material (e.g., air bag)."	O	
SupplierLineId	Supplier-assigned line code for an established manufacturer to uniquely identify a part within a supplier's warehouse system.	O	
Status	Defines the type of status message that has occurred for the individual Part Order Line Item. This could contain information related to errors associated iwth invalid part numbers, etc.	O	
DealerNetPrice	Dealer net price of the individual part for the quantity indicated.	O	
SuggestedRetailPrice	Suggested retail price of the individual part for the quantity indicated.	O	
ItemIdDescription	Item part number detail description.	O	
AllowBackOrderInd	"Partial shipments permission."	O	
LineState	The LineState component represents the current and history states of the order line. This component may occur many times reflecting the history of states.	O	
Manufacturer	This is the name of the OEM who manufactured the part. This is the full noun name, not a code.	O	
AllowBackOrderPartialShip	Identifies if the dealer is willing to accept backorders and partial shipments on the order. Clearly communicates the deal intention for how to handle back orders and partial shipments. Note: Line item overrides can be made. If provided at the line level for any given line it overrides the values present at the header.	O	
AllowCrossShipmentInd	Permission indicator for multiple shipment sources. Note: Line item overrides can be made. If provided at the line level for any given line it overrides the values present at the header.	O	

Get Parts Order

Field / Component	Description	R/O	Business Rule
AllowSubstitutionInd	Indicates if the dealer allows a substituted part.	O	
AllowSupersessionInd	Indicates if the dealer allows a superseded part.	O	
ShipPriority	Defines two conceptsL The shipping method (e.g. ground or air) and the ship duration (how fast the customer wants the order to be delivered). ShipPriority applies to all warehouses items can be shipped from, unless the supplier accepts an AlternateShipPriority. If the supplier accpets AlternateShipPriority, then ShipPriority applies only to the facing warehouse fro the dealer. A facing warehous is the default, usually the most geographically close, warehouse for the dealer. Deprecated. Use:ShipCarrierTransMethodTypeCode	O	
SupplierToDealerComments	Enables a Supplier to send comments to the dealer without disturbing dealer line comments. Otherwise, the supplier will have to either overwrite or append Supplier related comments to Dealer comments.	O	
Line	This Line component references the child order line. This is an optional one-to-many recursive relationship between order lines. This is used for splitting an order line, kits, substitutions, and part supersession. In such case, the current line becomes the parent of the child line.	O	This component is only to be used in: AcknowledgePartsOrder, ShowPartsOrder, ChangePartsOrder
ChildLineReasonCode	The reason this line has child lines.	O	This component is only to be used in: AcknowledgePartsOrder, ShowPartsOrder, ChangePartsOrder
ChildLinePricingAppliesInd	Identifies if the pricing of the child line applies.	O	This component is only to be used in: AcknowledgePartsOrder, ShowPartsOrder, ChangePartsOrder
ChangeInd	Used to identify if a field or sub-componet has changed. (excluding child Lines).	O	(INACTIVE) Only used in the Change Parts Order BOD.
CrossShipmentRestriction	Reduce the options of the OEM when shipping and order to the Dealer. This will override the same field in the header.	O	

Get Parts Order

Field / Component	Description	R/O	Business Rule
ShipmentCarrierDetail	The ShipmentCarrierDetail component is used to describe the shipment carrier to be used for a shipment and the method by which the shipment will be made.	O

TermsDetail

These field(s) use this type: **Terms**.

The Terms component represents the payment terms as specified by the supplier in a program interpretable way. Such information can tie to the accounting package of a DMS.

Name	TermsDetail
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
TermsStartDate	The start date for the payment term of the record.	R	
TermsDueDate	The due date for the payment term of this record.	R	
TermsDiscountPercentage	The amount of discount to the total amount of the order multiplied by the MinimumPaymentPercent. This could be 0. An example of a percentage value shown in decimal form would be 56.5% which would be 0.565 in decimal form.	R	
MinimumPaymentPercent	The minimum percentage of payment for this Terms record. An example of a percentage value shown in decimal form would be 56.5% which would be 0.565 in decimal form.	R

AccountingDate

Month and year accounting date conforms to ISO 8601 format rules Ex: \d\d\d\d-\d\d

Name	AccountingDate
-------------	-----------------------

Base XSD Type: gYearMonth

AcknowledgmentCode

These field(s) use this type: **AcknowledgmentCode**.

Represents a list of codes that specify status values for the acknowledgment.

Name	AcknowledgmentCode
-------------	---------------------------

Base XSD Type: string

Code Value	Description
0	0 Ã¢â¬Â# Accepted as received
1	1 Ã¢â¬Â# Accepted with modifications in the header only or in the header and in the line
2	2 Ã¢â¬Â# Order has been rejected

AddressLine

Get Parts Order

These field(s) use this type: **AddressLine**.

Indicates the multiple lines of an address. The first line is typically the street name and number.

Name	AddressLine
------	-------------

*Base XSD Type: string

AddressVerificationCode

These field(s) use this type: **AddressVerificationCode**.

Code resulting from verification of address to credit card number.

Name	AddressVerificationCode
------	-------------------------

*Base XSD Type: string

AllowBackOrderInd

These field(s) use this type: **AllowBackOrderInd,AllowBackOrderInd**.

Partial shipments permission.

Name	AllowBackOrderInd
------	-------------------

*Base XSD Type: string

Code Value	Description
0	
1	

AllowBackOrderPartialShip

These field(s) use this type: **AllowBackOrderPartialShip,AllowBackOrderPartialShip**.

Identifies if the dealer is willing to accept backorders and partial shipments on the order.

Get Parts Order

Name	AllowBackOrderPartialShip
*Base XSD Type: string	
Code Value	Description
No Back Order	Dealer will not accept back orders
No Back Order Ship Available	Back order shipping is not available
Allow Back Order	Dealer will allow back orders
Allow Back Order No Partial	Dealer will allow back orders with no partial shipments

AllowCrossShipmentInd

These field(s) use this type: AllowCrossShipmentInd,AllowCrossShipmentInd.

Permission indicator for multiple shipment sources.

Name	AllowCrossShipmentInd
*Base XSD Type: string	
Code Value	Description
0	
1	

AllowSubstitutionInd

These field(s) use this type: AllowSubstitutionInd.

Indicates if the dealer allows substituted part.

Name	AllowSubstitutionInd
*Base XSD Type: string	

Get Parts Order

Code Value	Description
0	
1	

AllowSupersessionInd

These field(s) use this type: AllowSupersessionInd.

Indicates if the dealer allows a superseded part.

Name	AllowSupersessionInd
*Base XSD Type: string	
Code Value	Description
0	
1	

AlternateShipToInd

These field(s) use this type: AlternateShipToInd.

Indicates if the order can be shipped to the alternate address.

Name	AlternateShipToInd
*Base XSD Type: string	
Code Value	Description
0	
1	

AssigningOrganizationPartyId

These field(s) use this type: AssigningPartyId.

Assigning Organization Party Id

Name	AssigningOrganizationPartyId
------	------------------------------

*Base XSD Type: string

Code Value	Description
LegalId	Legal ID
NationalId	Government-assigned ID such as a social security Number
Other	Other
DUNS	Dun and Bradstreet
MotorDealerRegistrationId	Department of Motor Vehicle Registration number for a dealer. This is the dealer's license number to do business.
GSTRegistrationId	Canadian Goods and Services Tax Id.
HSTRegistrationId	Canadian HarmonizedTax Id.
Certification Of Registration Id	Id of the certificate of registration assigned to a business to allow that business to collect and remit certain taxes or fees to a state.
QSTRegistrationId	Quebec sales tax id.

AuthorizationDateTime

These field(s) use this type: AuthorizationDateTime.

The date and time the auhtorization was completed.

Name	AuthorizationDateTime
------	-----------------------

*Base XSD Type: dateTime

Get Parts Order

AuthorizationNumber

These field(s) use this type: AuthorizationNumber.

Authorization Number

Name	AuthorizationNumber
------	---------------------

*Base XSD Type: string

BinLocation

These field(s) use this type: BinLocation.

Dealer specific location of part.

Name	BinLocation
------	-------------

*Base XSD Type: string

ChangeInd

These field(s) use this type: ChangeInd,ChangeInd.

Indicates whether a field or sub-component has changed.

Name	ChangeInd
------	-----------

*Base XSD Type: string

Code Value	Description
0	
1	

ChildLinePricingAppliesInd

These field(s) use this type: ChildLinePricingAppliesInd.

Get Parts Order

Identifies if the pricing of the child line(s) applies.

Name	ChildLinePricingAppliesInd
------	----------------------------

*Base XSD Type: string

Code Value	Description
------------	-------------

0	
---	--

1	
---	--

ChildLineReasonCode

These field(s) use this type: **ChildLineReasonCode**.

The reason this line has child lines.

Name	ChildLineReasonCode
------	---------------------

*Base XSD Type: string

Code Value	Description
------------	-------------

Multi-Condition	One or more child lines exist due to differences in allocation such as back orders and warehouse supply.
-----------------	--

Kit Exploded	One or more child lines exists to express the availability of parts within the kit.
--------------	---

Superseded	One or more child lines exist to express the ordered part was superseded by the listed parts.
------------	---

Substituted	One or more child lines exist to express the ordered part was substituted by the listed parts.
-------------	--

City

These field(s) use this type: **City**.

City of the Address.

CustomerName

These field(s) use this type: **CustomerName**.

Free form text associated with order. May be name of customer associated with the order line or special order information.

Name	CustomerName
*Base XSD Type: string	

Date

Date conforms to ISO 8601 format rules EX: \d\d\d\d-\d\d-\d\d

Name	Date
------	------

Get Parts Order

*Base XSD Type: date

DateTime

These field(s) use this type: **CreationDateTime.**

Date and time conforms to ISO 8601format rules without offset EX:2003-11-05T13:15:30Z

Name	DateTime
------	----------

*Base XSD Type: dateTime

DBAName

These field(s) use this type: **DBAName.**

Doing Business As name.

Name	DBAName
------	---------

*Base XSD Type: string

DealerOrderNumber

These field(s) use this type: **DealerOrderNumber.**

A Dealer assigned identifier for the order. i.e. The Part Order number.

Name	DealerOrderNumber
------	-------------------

*Base XSD Type: string

DiagnosticCodes

These field(s) use this type: **DiagnosticCode.**

One or more Manufacturer Diagnostics Codes taken during the Repair Process for this job

Get Parts Order

Name	DiagnosticCodes
------	-----------------

*Base XSD Type: string

DocumentDateTime

These field(s) use this type: DocumentDateTime.

Is the date and time the document was last created. This is not the date and time that the BOD message instance was created.

Name	DocumentDateTime
------	------------------

*Base XSD Type: dateTime

DueDate

These field(s) use this type: DueDate.

The absolute due date.

Name	DueDate
------	---------

*Base XSD Type: date

DurationMeasure

These field(s) use this type: DurationMeasure.

The measure of the length of time for this time period such as hours, days, weeks, months, years.

Name	DurationMeasure
------	-----------------

*Base XSD Type: string

Code Value	Description
nanosecond	Nanosecond
microsecond	Microsecond

Not Applicable	
Referral	
Referral identifies the fact the part on the subject line has been referred to another supplier and will not be reported on through this parts order going forward. The Primary Supplier is giving a referral to another Supplier for this particular line. It is similar to canceling a line. The Primary Supplier will not report on this line any further with this order. The Dealer will still receive the part, however it will be a different Supplier providing the part.

OriginatingWarehouse

These field(s) use this type: **OriginatingWarehouse**.

Indicates which warehouse or distribution center from which a shipment originates.

Name	OriginatingWarehouse
------	----------------------

*Base XSD Type: string

PartClass

These field(s) use this type: **PartClass**.

Gifts, literature, keys, regular parts Inventory Class code (if any) used in DMS system.

Get Parts Order

Name	PartClass
------	-----------

*Base XSD Type: string

PartDimensions

These field(s) use this type: **PartDimensions**.

Indicates the dimensions of a part, such as the length and width of a piece of cloth or leather.

Name	PartDimensions
------	----------------

*Base XSD Type: string

PartLineInternalReference

These field(s) use this type: **PartLineInternalReference**.

Internal DMS tracking information. Used to indicate relationships between internal DMS data and the part line information being sent to manufacturer.

Name	PartLineInternalReference
------	---------------------------

*Base XSD Type: string

PartType

These field(s) use this type: **PartType**.

Specifies whether the parts are indicated by manufacturer part code or Part Number - H = Manufacturer Part Code, P = Part Number

Name	PartType
------	----------

*Base XSD Type: string

Code Value	Description
H	Manufacturer Part Code
P	"P" = Pending

Get Parts Order

PartVerification

These field(s) use this type: **PartVerification**.

Indicates that the dealer is assuring the manufacturer that the line entry is correct (e.g., for unusually large quantity).

Name	PartVerification
------	------------------

*Base XSD Type: string

PaymentMethod

These field(s) use this type: **PaymentMethod**.

Indicates the method of payment (e.g., cash, credit card, etc.).

Name	PaymentMethod
------	---------------

*Base XSD Type: string

Code Value	Description
Terms	Indicates that payment terms are provided.
COD	Cash On Delivery
Due On Receipt	Payment is due upon receipt of invoice.
Credit Card	Indicates that a credit card will be used as the method of payment.
Check	Indicates that a check will be used as the method of payment.
EFT	Electronic funds transfer.

PrintInd

These field(s) use this type: **PrintInd.**

Print the document flag.

Name	PrintInd
------	----------

*Base XSD Type: string

Get Parts Order

Code Value	Description
0	
1	

Priority

These field(s) use this type: **Priority**.

Indicates manufacturer handling and processing urgency

Name	Priority
------	----------

*Base XSD Type: string

PromisedDeliveryDate

These field(s) use this type: **PromisedDeliveryDate,PromisedDeliveryDate**.

Indicates the date in which the order was promised to be delivered to the customer.

Name	PromisedDeliveryDate
------	----------------------

*Base XSD Type: date

PromisedShipDate

These field(s) use this type: **PromisedShipDate,PromisedShipDate**.

Indicates the date in which the order was promised to be shipped from the supplier to the customer.

Name	PromisedShipDate
------	------------------

*Base XSD Type: date

PromotionCode

Get Parts Order

These field(s) use this type: **PromotionCode**.

Indicator of parts promotion.

Name	PromotionCode
------	---------------

*Base XSD Type: string

Reference

These field(s) use this type: **ReferenceId**.

Reference notation

Name	Reference
------	-----------

*Base XSD Type: string

ReferenceNumber

Reference number

Name	ReferenceNumber
------	-----------------

*Base XSD Type: string

ReferralShipMode

These field(s) use this type: **ReferralShipMode**.

The shipping mode applied to orders shipped by the referring depot center.

Name	ReferralShipMode
------	------------------

*Base XSD Type: string

RepairOrderNumber

Get Parts Order

These field(s) use this type: **RepairOrderNumber,RepairOrderNumber.**

Identification number of repair order assignedby dealer or DMS.

Name	RepairOrderNumber
-------------	--------------------------

*Base XSD Type: string

RequestedShipDate

These field(s) use this type: **RequestedShipDate.**

The date the dealer is requesting the syoolier to ship the order. This could be sooner or later that the typical stock order shipping date. However, it is expected this field is intended to delay the shipment from the typical stock order processing to some later preferred date.

Name	RequestedShipDate
-------------	--------------------------

*Base XSD Type: date

SecondaryPassword

These field(s) use this type: **SecondaryPassword.**

Secondary password used to validate access to the dealer information

Name	SecondaryPassword
-------------	--------------------------

*Base XSD Type: string

SequenceCode

These field(s) use this type: **SequenceCode.**

A pre-defined sort sequence for order consolidation, i.e., sort by part order.

Name	SequenceCode
-------------	---------------------

*Base XSD Type: string

Get Parts Order

SerialNumber

Serial Number

Name	SerialNumber
------	--------------

*Base XSD Type: string

ShipCarrierCollectMethodCode

These field(s) use this type: **ShipCarrierCollectMethodCode**.

Indicates how the carrier is to collect payment for the delivery service.

Name	ShipCarrierCollectMethodCode
------	------------------------------

*Base XSD Type: string

Code Value	Description
Prepaid	The delivery has been paid for by the shipper.
Collect	The delivery will be paid for at the time of receipt.

ShipCarrierRestrictByCountry

These field(s) use this type: **ShipCarrierRestrictByCountry**.

Indicates the Shipment Carrier's service is restricted to the specified country.

Name	ShipCarrierRestrictByCountry
------	------------------------------

*Base XSD Type: string

ShipmentCarrierDeliveryCode

These field(s) use this type: ShipmentCarrierDeliveryCode.

Indicates the application of special options for delivery.

Name	ShipmentCarrierDeliveryCode
------	-----------------------------

*Base XSD Type: string

Code Value	Description
Saturday	Shipment Carrier to make a Saturday delivery
Sunday	Shipment Carrier to make a Sunday delivery
Pick-up	Customer to pick-up item at Shipment Carrier depot.

ShipmentCarrierPurposeComment

These field(s) use this type: ShipmentCarrierPurposeComment.

Free form text used to further define the shipment carrier service.

Name	ShipmentCarrierPurposeComment
------	-------------------------------

*Base XSD Type: string

ShipmentCarrierServLevelCode

These field(s) use this type: **ShipmentCarrierServLevelCode**.

Indicates the priority of service to be provided by the Shipment Carrier

Name	ShipmentCarrierServLevelCode
------	------------------------------

*Base XSD Type: string

Code Value	Description
0 Day	0 Day is same day
1 Day	1 Day is next day and/or overnight
2 Day	2 Day
3 Day Deferred	3 Day Deferred

ShipPriority

These field(s) use this type: **ShipPriority,ShipPriority**.

Defines two concepts: The shipping method (e.g. ground or air) and the ship duration (how fast the customer wants the order to be delivered). ShipPriority applies to all warehouse items can be shipped from, unless the supplier accepts an AlternateShipPriority. If the supplier accepts AlternateShipPriority, then ShipPriority applies only to the facing warehouse for the dealer. A facing warehouse is the default, usually the most geographically close, warehouse for the dealer.

*Base XSD Type: string

StartDateTime

These field(s) use this type: StartDateTime.

Get Parts Order

The date, time, date time or other date time value for the start of this period of time.

Name	StartDateTime
------	---------------

*Base XSD Type: dateTime

StateDateTime

These field(s) use this type: StateDateTime,StateDateTime.

The date and time the state took effect. Only the most recent state is the current state. This facilitates a dealer awareness of the order fulfillment timeline.

Name	StateDateTime
------	---------------

*Base XSD Type: dateTime

StateOrProvince

These field(s) use this type: StateOrProvince.

Is the State or Province of a given Address.

Name	StateOrProvince
------	-----------------

*Base XSD Type: string

StatusCode

These field(s) use this type: StatusCode.

A code identifying the reason for the status message.

Name	StatusCode
------	------------

*Base XSD Type: string

Get Parts Order

Code Value	Description
Success	The operation completed successfully. This does not necessarily mean that the BOD was processed. Instead it means that the client's role is done and that it won't receive any error messages later. Type of Response Code: Success.
Unspecified	An unspecified error occurred. The StatusText field contains the complete text.
Not In Inventory	Inventory is not currently available and back ordering was not requested.
Discontinued	The part has discontinued.
Invalid Part	Invalid part number.
Not Yet Available	The part is scheduled for a future release date and is not available at this time.
Not Authorized	The part is not authorized for your product line.
Under Development	The part is under development and not ready for sale.
Assembly Only	The part is a component part and is only available as an assembly.
Component Only	The part is an assembly part and is only available as a component.
Internal Use Only	The part is reserved for manufacturing and supplier internal use; it is not a service replacement part.
Recalled	The part has been recalled.
Cannot Sell	The part is not available for sale for an unspecified reason.
Export Only	The part is not available for sale in the United States; it is for export vehicles only.
Credit Limit Exceeded	Credit limit exceeded.
Credit Card Denied	Credit card transaction denied by creditor.
Account On Hold	The dealer's account has been put on hold.
Invalid Unit Of Measure	The unit of measurement was invalid for this part number.
Invalid Promotion Code	The promotion code is invalid.
Invalid Shipping Method	The shipping method is invalid, for example, shipping by ground to Puerto Rico.
Duplicate Line Number	The line number is the same as another line within this transaction.

Fields and Global Attributes

Global declarations are items such as elements, attribute groups, and group definitions. These items are not defined within any particular component. A component may reference these definitions. Within a STAR XML Schemas these are typically known as global fields.

ApplicationArea

These field(s) use this type: **ApplicationArea**.

Provides the information that an application may need to know in order to communicate in an integration of two or more business applications. The ApplicationArea is used at the applications layer of communication. While the integration frameworks web services and middleware provide the communication layer that OAGIS operates on top of.

Provides the information that an application may need to know in order to communicate in an integration of two or more business applications. The ApplicationArea is used at the applications layer of communication. While the integration frameworks web services and middleware provide the communication layer that OAGIS operates on top of.

Name	ApplicationArea

</ApplicationArea>
```

Get

These field(s) use this type: **Get**.

Get Parts Order

The Get verb is to communicate to a business software component a request for an existing piece of information to be returned. The Get may be paired with most of the nouns defined in the OAGIS specification. The response to this request is the Show verb. The behavior of a BOD with a Get verb is quite predictable across most of the nouns it may be paired with. The Get is designed to retrieve a single piece of information by using that information's primary retrieval field, or key field. The Get verb is not used to request several documents at once. The GetList verb is designed to achieve that purpose and will be covered in more detail later.

Selection Criteria: There are two types of selection capabilities for most BOD's that use the Get verb.

- 1) The first selection capability is called Field-Based Selection. Within a Get-based Business Object Document, the first Data Type that occurs in a specific BOD structure is commonly used to provide the Field-Based Selection criteria. This is always defined within the specific BOD and is commonly the required fields for that specific Data type. The Field-Based Selection enables the requester to provide a value or values (in the case of multiple required Field Identifiers), in the required fields. Then the responding component uses those values to find and return the requested information to the originating business software component.
- 2) The second type of selection capability for Get-based BODs is called Data Type Selection. Data Type selection enables the requester to identify which Data Types within the noun are requested to be returned in the response. The use of this capability is described for each corresponding Data Type for all BODs that use the Get verb. The Data Types are identified for retrieval within the Get instance of a BOD by including the name of the Data Type in the meta data but without any Field Identifiers or Segments identified within the Data Type. This will signify to the responding application that all of the data that corresponds to that Data Type is to be included in the response. If the Data Type is not requested, the Data Type identifier is not included in the Get request and this will signify to the responding component that the Data Type is not to be returned.
