Process Validate Initiative

Process Validate Initiative Guidelines

Overview

This document is a guideline on how to use the Process Validate Initiative Business Object Document (BOD). Process Validate Initiative has been defined in the context of STAR for the Automotive Retail Industry. The scope of this BOD is to define the Process Validate Initiative process for individual consumers who service their automobiles through their OEM's authorized Dealers. The focus is on Dealer and OEM interactions, not third party organizations. NOTE: Although this is the traditional use of the Process Validate Initiative, this BOD could be used to send Process Validate Initiative information between any two business parties.

Implementation Guidelines provide detailed information regarding the structure and meaning of the Process Validate Initiative BOD and corresponds directly to the Process Validate Initiative schema. In addition to structure and meaning, the Implementation Guidelines identify various business rules for specific fields/components that due to their nature, i.e. field interdependence, are not possible to express using schema. Please note that although these business rules are not included in the schema, they **MUST** be followed to be STAR Compliant. Therefore, the Process Validate Initiative Implementation Guidelines must be used in concert with the Process Validate Initiative schema during development and should **NOT** be considered a supplement or substitution to the schema. For more information regarding STAR XML Data Compliance, please review the STAR Data Compliance Guidelines document located on the STAR Web site.

For a copy of the corresponding Process Validate Initiative schema, please download the appropriate STAR schema repository from the XML portion of the STAR website (www.starstandard.org). Prior to downloading the schema, users are encouraged to download the STAR XML Reference/Implementation document also located on the XML portion of the STAR website. This document provides an overview of the STAR BOD development methodology, how to download and read STAR schema, and various frequently asked questions related to the implementation of STAR BODs.

STAR has followed the Open Application Group's Business Object Document methodology to develop the Process Validate Initiative BOD. Where possible, STAR has mapped to existing OAGI fields and components. Note however that the STAR Process Validate Initiative BOD is unique to the Retail Automotive industry and is not an extension of any existing OAGIS BODs.

For more information on the Open Applications Group's BODs and related documentation please refer to the Open Applications Group's Web site at (www.openapplications.org).

Schema Field Usage

STAR uses the same Noun in the schema for all the Noun/Verb combinations of the Process Validate Initiative except the Get verb. Please refer to each Noun/Verb combination within this document to understand the requirements for each specific BOD. Although the Noun will always have every field defined for the Noun in the schema, each Noun/Verb combination may not use all of the fields. If a field is not used by a BOD, it will be noted in the business rules.

Process Validate Initiative

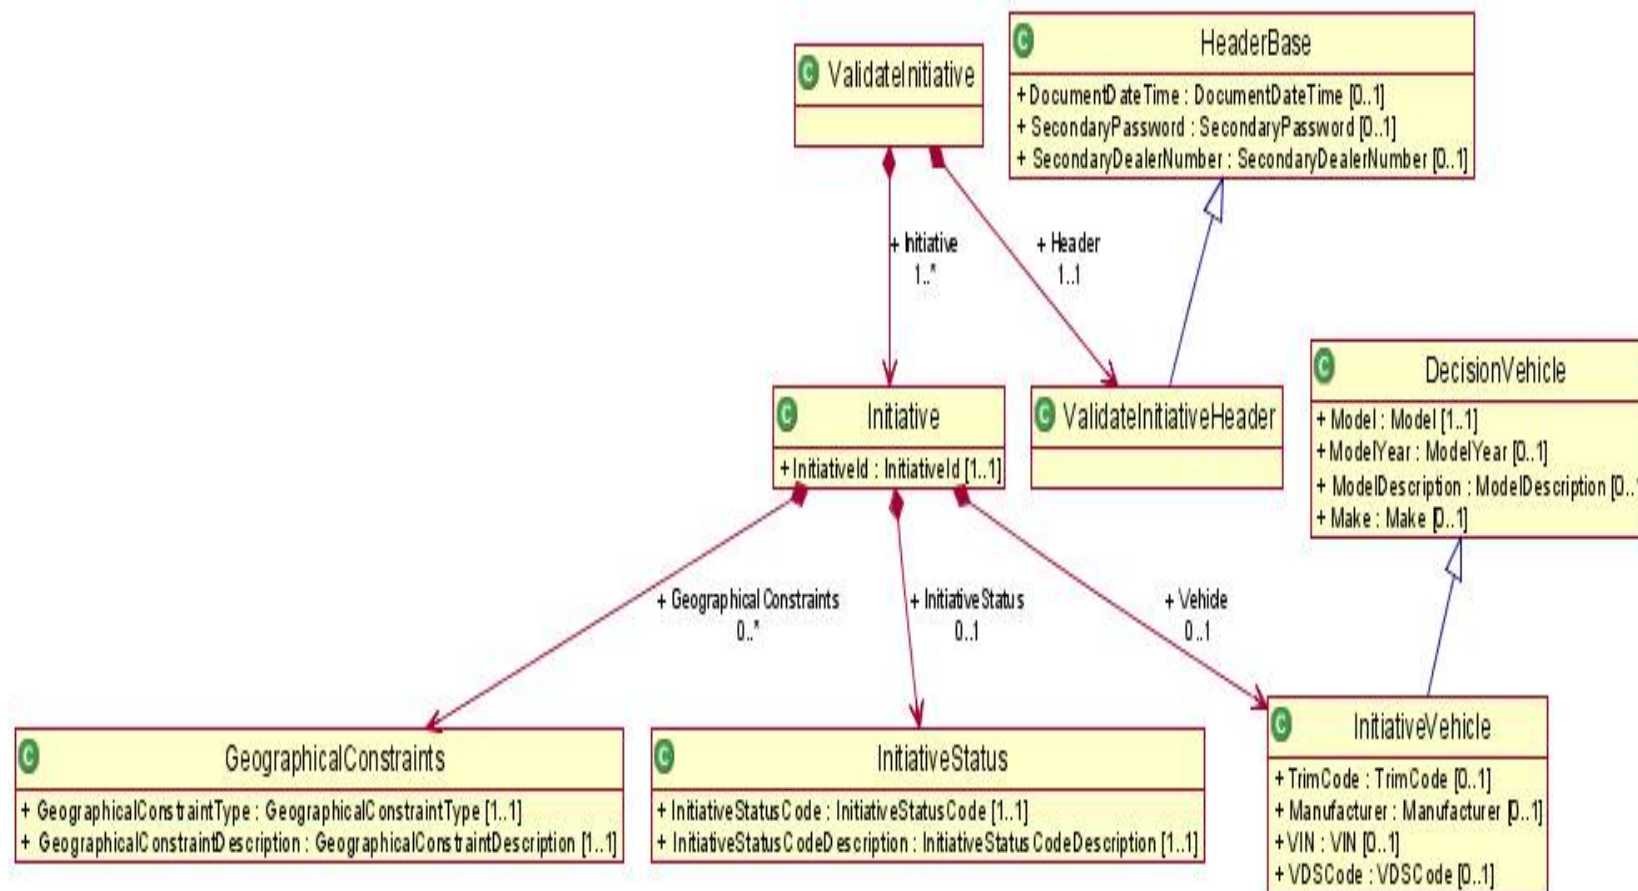

Business Scenario

The Process Validate Initiative Binary Collaboration starts with the transmission of the Initiatives from the Dealer via the Process Validate Initiatives BOD to the OEM. In response, the OEM validates the Initiative information and sends back the results to the Dealer via the Acknowledge Validate Initiative BOD. Note: This scenario is an example of how the Process Validate Initiative BOD can be used. Implementations may vary.

Process Validate Initiative

Relationship Diagram

The following is a representation of the Noun for this BOD. It is a high level overview provided to give an idea of the hierarchy of the Noun's components.

Schema Document Properties

Declared Namespaces

A schema can contain more than one namespace. According to Whatis.com, "In general, a namespace uniquely identifies a set of names so that there is no ambiguity when objects having different origins but the same names are mixed together." An example would be two namespaces that both defined an element called ID, without a namespace it would be impossible to determine which definition was being used.

Prefix	Namespace
Default namespace	http://www.starstandards.org/STAR
xml	http://www.w3.org/XML/1998/namespace
xsd	http://www.w3.org/2001/XMLSchema

Components and Data Types

Global definitions include components, code lists, and data types. Components are used to build the data structures that make up a Noun and it's requirements. Data types specify the type of data that a component's fields may contain. Not all definitions are included in this documentation. Please see either the STAR Code List guideline or Data Type Guidelines for further information.

AcknowledgableVerb

Name	AcknowledgableVerb
Abstract	yes

</...>
```

ApplicationArea

These field(s) use this type: **ApplicationArea**.

Name	ApplicationArea
Abstract	no

Data Elements and Components

Process Validate Initiative

Field / Component	Description	R/O	Business Rule
Sender	Identifies characteristics and control identifiers that relate to the application that created the Business Object Document. The sender area can indicate the logical location of the application and/or database server, the application, and the task that was processing to create the BOD.	R	
CreationDateTime	is the date time stamp that the given instance of the Business Object Document was created. This date must not be modified during the life of the Business Object Document.	R	DateTime fields must be formatted as XML Schema Datetimes in UTC/GMT format without offsets. Example: 2003-11-05T13:15:30Z
Signature	If the BOD is to be signed the signature element is included, otherwise it is not. Signature supports any digital signature that maybe used by an implementation of OAGIS. The qualifyingAgency identifies the agency that provided the format for the signature. This element supports any digital signature specification that is available today and in the future. This is accomplished by not actually defining the content but by allowing the implementation to specify the digital signature to be used via an external XML Schema namespace declaration. The Signature element is defined to have any content from any other namespace. This allows the user to carry a digital signature in the xml instance of a BOD. The choice of which digital signature to use is left up to the user and their integration needs.	O	
BODId	The BODId provides a place to carry a Globally Unique Identifier (GUID) that will make each Business Object Document instance uniquely identifiable. This is a critical success factor to enable software developers to use the Globally Unique Identifier (GUID) to build the following services or capabilities: 1. Legally binding transactions, 2. Transaction logging, 3. Exception handling, 4. Re-sending, 5. Reporting, 6. Confirmations, 7. Security.	O	
Destination	Information related to the receiver of the BOD	R	

XML Instance Representation

BusinessObjectDocument

Name	BusinessObjectDocument
Abstract	no

Attributes

Field / Component	Description	R/O	Business Rule
revision	This should contain the STAR repository version in the following recommended format. 4.2.1_M20080416. Where the first part indicates the version of the STAR repository and anything after the _ indicates the Milestone build that is being used. If referring to an official published version then only the STAR Repository version is required.	O	
release	Indicates the OAGIS release that this BOD belongs.	O	
environment	Indicates whether this BOD is being sent in a "Test" or a "Production" mode. If the BOD is being sent in a test mode, it's information should not affect the business operation. However, if the BOD is sent in "Production" mode it is assumed that all test has been complete and the contents of the BOD are to affect the operation of the receiving business application(s).	O	
lang	Indicates the language that the contents of the BOD is in unless otherwise stated.	O	
bodVersion	Deprecated as of STAR 4.2.2. It is recommended to use the revision attribute to identify the repository and the noun. May be removed in a new major version of the STAR repository. Indicates the version number of the BOD.	O

Destination

These field(s) use this type: **Destination**.

Name	Destination
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
DestinationNameCode	Code for destination of file (i.e.Short Manufacturer or DSP code)	O	Must use a valid code from the ShortMfg/RSP list on http://www.starstandards.org
DestinationURI	Physical address of the destination	O	
DestinationSoftwareCode	Additional information about the destination application	O	
DestinationSoftware	For which software destination file is intended (may not be known).	O	
DealerNumber	Target Dealer Code receiving information	O	
StoreNumber	Dealer code store number (DMS assigned)	O	
AreaNumber	Dealer code area number (DMS vendor assigned)	O	
DealerCountry	Target Dealer country location	O	

Process Validate Initiative

Field / Component	Description	R/O	Business Rule
PartyId	The Party Id field uniquely identifies the Receiver of the message. This element can be used for parties within the Automotive Community as well as external parties. Party Id is not intended as a replacement for the Dealer Number. Suggested formats for OEMs or other large institutions include: DUNs Number, ShortMfgCode + DUNs, or ShortMfgCode. The suggested format for Dealers is: ShortMfgCode+Dealer Number.	O	
LocationId	The Location Id field uniquely identifies the location of the Receiver of a message. This Id may be aligned with a physical address or data centers. This field provides an additional level of granularity beyond the usage of the Party Id for additional routing and deliver of data.		
ServiceId	The Service Id field identifies the particular service to which a message is being sent, e.g., an inventory service.	O	

XML Instance Representation

```
<...>
  <DestinationNameCode> ShortMfg </DestinationNameCode> [0..1]
  <DestinationURI> URI </DestinationURI> [0..1]

  <LocationId> LocationId </LocationId> [0..1]
  <ServiceId> ServiceId </ServiceId> [0..1]
</...>
```

GeographicalConstraintDescription

These field(s) use this type: **GeographicalConstraintDescription**.

Free-form text field describing the value of the constraints, i.e., the country name(s) to which the initiative applies, US state(s) to which the initiative applies, zip code(s) to which the initiative applies, etc.

Process Validate Initiative

Name	GeographicalConstraintDescription
Abstract	no

XML Instance Representation

```
<...  
language="Language [0..1]">  
  Description  
</...>
```

GeographicalConstraints

These field(s) use this type: **GeographicalConstraints**.

The GeographicalConstraints component is used to define the geographical region or regions or a range of regions to which the initiative is limited. Example 1: An EmployeePricing initiative may only apply to Zip code 12345. All other zip codes do not apply Example 2: An EmployeePricing initiative may apply to Zip code 12345 as well as zip code 54321, and 65431. All other zip codes do not apply. Example 3: An EmployeePricing initiative applies to the following range of zip codes 12345 to 12349. Any zip codes out side of this range do not apply.

Name	GeographicalConstraints
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
GeographicalConstraintType	Identifies the geographical region or code by which the initiative is constrained.	R	
GeographicalConstraintDescription	Free-form text field describing the value of the constraints, i.e., the country name(s) to which the initiative applies, US state(s) to which the initiative applies, zip code(s) to which the initiative applies, etc.	R	

XML Instance Representation

```

</...>
```

Initiative

These field(s) use this type: **Initiative**.

The Initiative component represents money an interest rate programs/incentives based on the vehicle or money programs/incentives based on an individual customers.

Name	Initiative
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
InitiativeId	Initiative Identification (i.e., Manufacturer incentive reimbursement program identification or dealer offerings)	R	
Vehicle	The Vehicle component represents the vehicle to which the initiative applies.	O	
GeographicalConstraints	The GeographicalConstraints component is used to define the geographical region or regions or a range of regions to which the initiative is limited. Example 1: An EmployeePricing initiative may only apply to Zip code 12345. All other zip codes do not apply Example 2: An EmployeePricing initiative may apply to Zip code 12345 as well as zip code 54321, and 65431. All other zip codes do not apply. Example 3: An EmployeePricing initiative applies to the following range of zip codes 12345 to 12349. Any zip codes out side of this range do not apply.	O	
InitiativeStatus	The InitiativeStatus component is used to indicate whether the given initiative is valid or invalid with a textual description of that status.	O	(INACTIVE) The InitiativeStatus Component is only to be used for the AcknowledgeValidateInitiative BOD.

Process Validate Initiative

XML Instance Representation

```
<...>
  <InitiativeId> InitiativeId </InitiativeId> [1]
  <Vehicle> InitiativeVehicle </Vehicle> [0..1]
  <GeographicalConstraints> GeographicalConstraints </GeographicalConstraints> [0..*]

Data Elements and Components

Field / Component	Description	R/O	Business Rule
Process	The Process verb is used to request processing of the associated noun by the receiving application or business to party. In a typical external exchange scenario a Process BOD is considered to be a legally binding message. For example, if a customer sends a ProcessPurchaseOrder BOD to a supplier and the supplier acknowledges with a positive AcknowledgePurchaseOrder, then the customer is obligated to fulfill the agreement, unless of course other BODs are allowed to cancel or change the original order. Process Validate Initiative

Field / Component	Description	R/O	Business Rule
LogicalId	Provides the logical location of the server and applications from which the Business Object Document originated. It can be used to establish a logical to physical mapping, however its use is optional. Each system or combination of systems should maintain an external central reference table containing the logical names or logical addresses of the application systems in the integration configuration. This enables the logical names to be mapped to the physical network addresses of the resources needed on the network. Note: The technical implementation of this Domain Naming Service is not dictated by this specification. This logical to physical mapping may be done at execution time by the application itself or by a middleware transport mechanism, depending on the integration architecture used. This provides for a simple but effective directory access capability while maintaining application independence from the physical location of those resources on the network	O	
Component	Provides a finer level of control than Logical Identifier and represents the business application that issued the Business Object Document. Its use is optional. For STAR's use this is the DCS Software code name		
Task	Describes the business event that initiated the need for the Business Object Document to be created. For STAR, the task is defined in the Implementation Guidelines for each BOD. It is usually a short description of the BOD. Ex: SalesLead, CreditDecision, etc.	R	
ReferenceId	Enables the sending application to indicate the instance identifier of the event or task that caused the BOD to be created. This is used to correlate a response BOD to an originating BOD	O	
AuthorizationId	Identifies the authorization level of the user or application that is sending the Business Object Document Message. This authorization level being recognized by the receiving system indicates what can be done on the receiving system. For STAR, this is the User ID.	O	
CreatorNameCode	DCS Software Creator Code	R	
SenderNameCode	Additional information about the sending platform (i.e., Short MFG or DSP code).	R	Must use a valid code from the ShortMfg/RSP list on http://www.starstandards.org
SenderURI	Physical address of the sender	O	

Process Validate Initiative

Field / Component	Description	R/O	Business Rule
DealerNumber	Dealer Code of source of information	O	
StoreNumber	Dealer code store number (DMS assigned)	O	
AreaNumber	Dealer code area number (DMS vendor assigned)	O	
DealerCountry	Source Dealer country location	O	
Language	This code is used to define the language of the data used in this transaction	O	
DeliverPendingMailInd	Indicates if the user requests to receive pending mail that has been stored and has yet not been delivered yet. By selecting 0, the user will only receive the response for the current transaction the user is performing.	O	
Password	Token for application specific authentication. Used to authenticate dealership/users through application specific security	O	
SystemVersion	The sender's software version number.	O	
PartyId	The Party Id field uniquely identifies the Sender of the message. This element can be used for parties within the Automotive Community as well as external parties. Party Id is not intended as a replacement for the Dealer Number. Suggested formats for OEMs or other large institutions include: DUNs Number, ShortMfgCode + DUNs, or ShortMfgCode. The suggested format for Dealers is: ShortMfgCode+Dealer Number.	O	
LocationId	The Location Id field uniquely identifies the location of the Sender of a message. This Id may be aligned with a physical address or data centers. This field provides an additional level of granularity beyond the usage of the Party Id for additional routing and deliver of data.	O	
ServiceId	The Service Id field identifies the particular service from which a message is being sent, e.g., an inventory service.	O

Make

These field(s) use this type: **Make**.

Vehicle make code - Usually available in the VIN number (use NCIC code).

Name	Make
------	------

*Base XSD Type: string

Manufacturer

These field(s) use this type: **Manufacturer**.

Manufacturer Name

Name	Manufacturer
------	--------------

*Base XSD Type: string

MileageMeasure

M = Miles, K = Kilometers

Name	MileageMeasure
------	----------------

*Base XSD Type: string

Process Validate Initiative

Code Value	Description
M	"M" = Modified
K	Kilometers

Model

These field(s) use this type: **Model**.

Manufacturer-assigned model code of vehicle - Usually available in the VIN number (use NCIC code)

Name	Model
------	-------

*Base XSD Type: string

ModelDescription

These field(s) use this type: **ModelDescription**.

Descriptive vehicle model name

Name	ModelDescription
------	------------------

*Base XSD Type: string

ModelYear

These field(s) use this type: **ModelYear**.

Vehicle designated model year

Name	ModelYear
------	-----------

*Base XSD Type: gYear

Name

Process Validate Initiative

Name of the Party.

Name	Name
------	------

*Base XSD Type: string

Note

A free form note.

Name	Note
------	------

*Base XSD Type: string

PriceExplanation

These field(s) use this type: PriceExplanation.

Explanatory Note for Pricing

Name	PriceExplanation
------	------------------

*Base XSD Type: string

PricingTypeSource

These field(s) use this type: PricingTypeSource.

Source from which pricing type data originated (i.e. Blue Book, NADA, etc.).

Name	PricingTypeSource
------	-------------------

*Base XSD Type: string

Reference

These field(s) use this type: ReferenceId.

Process Validate Initiative

Reference notation

Name	Reference
------	-----------

*Base XSD Type: string

ReferenceNumber

Reference number

Name	ReferenceNumber
------	-----------------

*Base XSD Type: string

SecondaryPassword

These field(s) use this type: SecondaryPassword.

Secondary password used to validate access to the dealer information

Name	SecondaryPassword
------	-------------------

*Base XSD Type: string

ShortMfg

These field(s) use this type: SenderNameCode, DestinationNameCode.

Short Manufacturer or RSP Codes

Name	ShortMfg
------	----------

*Base XSD Type: string

SystemVersion

These field(s) use this type: SystemVersion.

Process Validate Initiative

The sender's software version number .

Name	SystemVersion
------	---------------

Base XSD Type: string

Text

These field(s) use this type:

CreatorNameCode,StoreNumber,AreaNumber>Password,DestinationSoftwareCode,DestinationSoftware,StoreNumber,AreaNumber,LogicalId,Component,T

Indicates generic text type

Name	Text
------	------

Base XSD Type: string

TrimCode

These field(s) use this type: TrimCode.

Manufacturer assigned trim code

Name	TrimCode
------	----------

Base XSD Type: string

URI

These field(s) use this type: SenderURI,DestinationURI.

URI

Name	URI
------	-----

Base XSD Type: anyURI

Process Validate Initiative

VDSCode

These field(s) use this type: VDSCode.

Vehicle Description Section- part of the VIN that correlates to a specific vehicle model, bodystyle, and grade

Name	VDSCode
------	---------

*Base XSD Type: string

VehiclePricingType

These field(s) use this type: VehiclePricingType.

Designates type of pricing for vehicle

Name	VehiclePricingType
------	--------------------

*Base XSD Type: string

Code Value	Description
------------	-------------

Taxable Selling Price	
Loan	Amount lenders typically loan on the listed vehicle.
Trade-In	Amount allowed by dealers on a trade.
Adjusted Gross Cap Cost	Adjusted gross cap cost due to tax calculations.
Adjusted Net Cap Cost	Adjusted net cap cost due to tax calculations.
Total Option MSRP	Total of all itemized products of the Manufactured Suggested Retail Price.

VIN

These field(s) use this type: **VIN**.

Process Validate Initiative

Federally defined 17 position vehicle identification number

Name

VIN

Base XSD Type: string

Year

Year

Name

Year

Base XSD Type: gYear

Fields and Global Attributes

Global declarations are items such as elements, attribute groups, and group definitions. These items are not defined within any particular component. A component may reference these definitions. Within a STAR XML Schemas these are typically known as global fields.

ApplicationArea

These field(s) use this type: **ApplicationArea**.

Provides the information that an application may need to know in order to communicate in an integration of two or more business applications. The ApplicationArea is used at the applications layer of communication. While the integration frameworks web services and middleware provide the communication layer that OAGIS operates on top of.

Provides the information that an application may need to know in order to communicate in an integration of two or more business applications. The ApplicationArea is used at the applications layer of communication. While the integration frameworks web services and middleware provide the communication layer that OAGIS operates on top of.

Name	ApplicationArea
Type	ApplicationArea
Nilable	no
Abstract	no

  <InitiativeStatus> InitiativeStatus </InitiativeStatus> [0..1]
</Initiative>
```

Process

These field(s) use this type: **Process**.

The Process verb is used to request processing of the associated noun by the receiving application or business to party. In a typical external exchange

Process Validate Initiative

scenario a Process BOD is considered to be a legally binding message. For example, if a customer sends a ProcessPurchaseOrder BOD to a supplier and the supplier acknowledges with a positive AcknowledgePurchaseOrder, then the customer is obligated to fulfil the agreement, unless of course other BODs are allowed to cancel or change the original order.
