Show Parts Locator

Show Parts Locator Guidelines

Overview

This document is a guideline on how to use the Show Parts Locator Business Object Document (BOD). Show Parts Locator has been defined in the context of STAR for the Automotive Retail Industry. The scope of this BOD is to define the Show Parts Locator process for individual consumers who service their automobiles through their OEM's authorized Dealers. The focus is on Dealer and OEM interactions, not third party organizations. NOTE: Although this is the traditional use of the Show Parts Locator, this BOD could be used to send Show Parts Locator information between any two business parties.

Implementation Guidelines provide detailed information regarding the structure and meaning of the Show Parts Locator BOD and corresponds directly to the Show Parts Locator schema. In addition to structure and meaning, the Implementation Guidelines identify various business rules for specific fields/components that due to their nature, i.e. field interdependence, are not possible to express using schema. Please note that although these business rules are not included in the schema, they **MUST** be followed to be STAR Compliant. Therefore, the Show Parts Locator Implementation Guidelines must be used in concert with the Show Parts Locator schema during development and should **NOT** be considered a supplement or substitution to the schema. For more information regarding STAR XML Data Compliance, please review the STAR Data Compliance Guidelines document located on the STAR Web site.

For a copy of the corresponding Show Parts Locator schema, please download the appropriate STAR schema repository from the XML portion of the STAR website (www.starstandard.org). Prior to downloading the schema, users are encouraged to download the STAR XML Reference/Implementation document also located on the XML portion of the STAR website. This document provides an overview of the STAR BOD development methodology, how to download and read STAR schema, and various frequently asked questions related to the implementation of STAR BODs.

STAR has followed the Open Application Group's Business Object Document methodology to develop the Show Parts Locator BOD. Where possible, STAR has mapped to existing OAGI fields and components. Note however that the STAR Show Parts Locator BOD is unique to the Retail Automotive industry and is not an extension of any existing OAGIS BODs.

For more information on the Open Applications Group's BODs and related documentation please refer to the Open Applications Group's Web site at (www.openapplications.org).

Schema Field Usage

STAR uses the same Noun in the schema for all the Noun/Verb combinations of the Show Parts Locator except the Get verb. Please refer to each Noun/Verb combination within this document to understand the requirements for each specific BOD. Although the Noun will always have every field defined for the Noun in the schema, each Noun/Verb combination may not use all of the fields. If a field is not used by a BOD, it will be noted in the business rules.

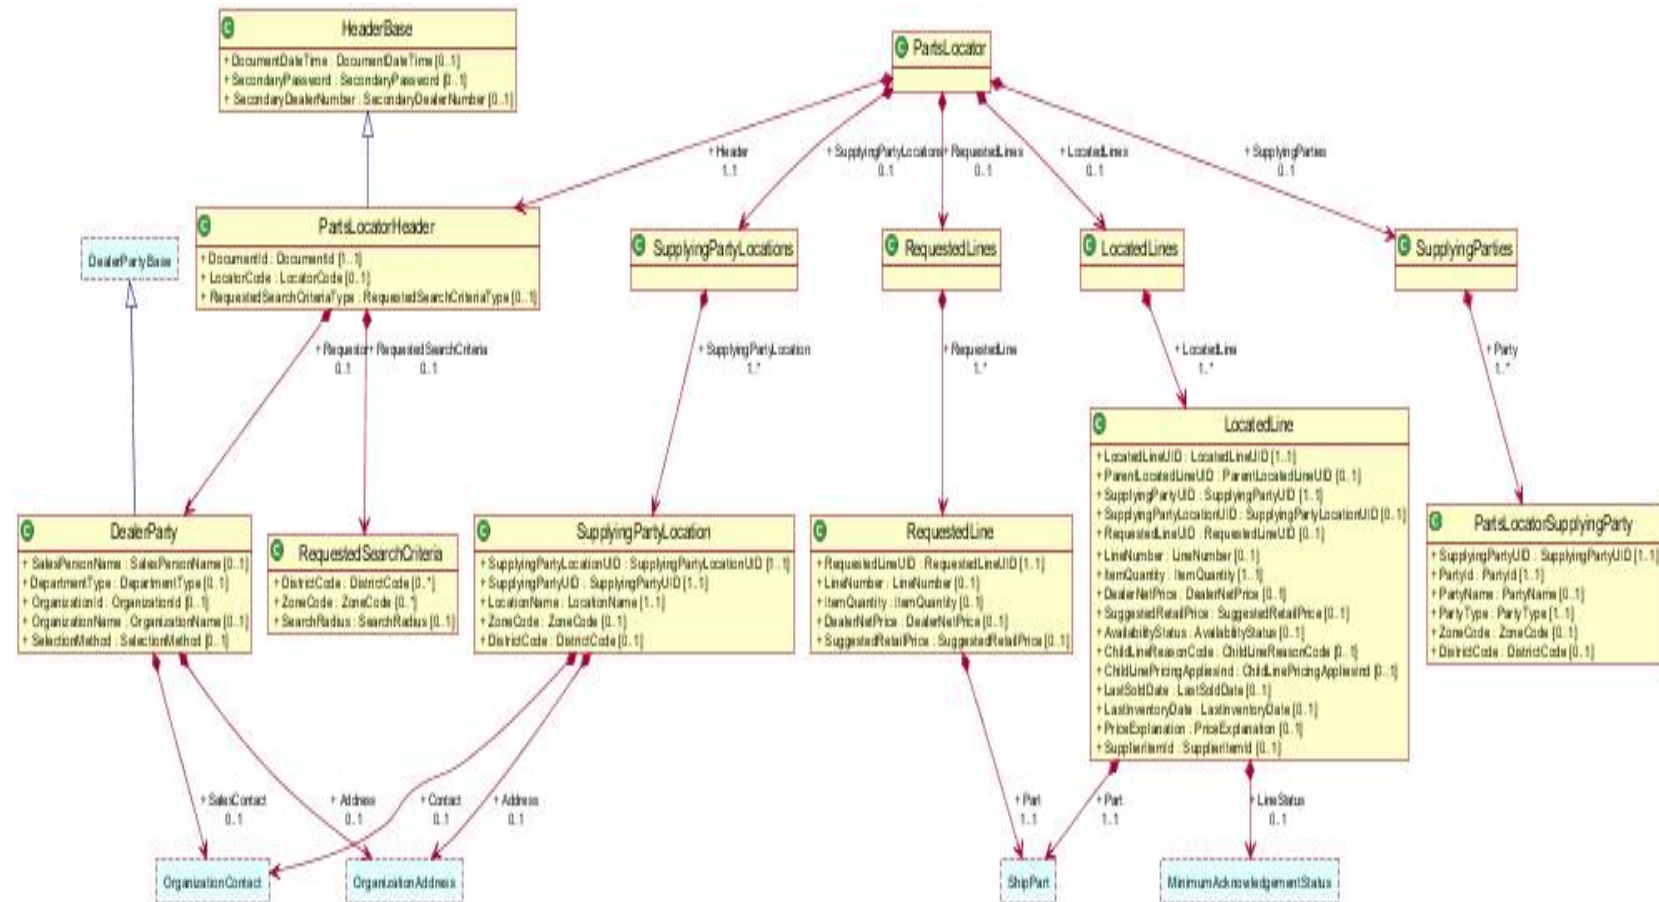

Business Scenario

Show Parts Locator

The Parts Locator Binary Collaboration starts with the transmission of a Parts Locator from the Dealer to the OEM. In response, the OEM may send Parts Locator information back to the Dealer acknowledging the requested parts, identifying backordered items, etc. This process occurs on demand as is needed. Note: This scenario is an example of how the Parts Locator BOD can be used. Implementations may vary.

Relationship Diagram

The following is a representation of the Noun for this BOD. It is a high level overview provided to give an idea of the hierarchy of the Noun's components.

Schema Document Properties

Declared Namespaces

A schema can contain more than one namespace. According to Whatis.com, "In general, a namespace uniquely identifies a set of names so that there is no ambiguity when objects having different origins but the same names are mixed together." An example would be two namespaces that both defined an element called ID, without a namespace it would be impossible to determine which definition was being used.

Prefix	Namespace
Default namespace	http://www.starstandards.org/STAR
xml	http://www.w3.org/XML/1998/namespace
star	http://www.starstandards.org/STAR
xsd	http://www.w3.org/2001/XMLSchema

Components and Data Types

Global definitions include components, code lists, and data types. Components are used to build the data structures that make up a Noun and it's requirements. Data types specify the type of data that a component's fields may contain. Not all definitions are included in this documentation. Please see either the STAR Code List guideline or Data Type Guidelines for further information.

AddressBase

Name	AddressBase
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
AddressLine	Indicates the multiple lines of an address. The first line is typically the street name and number.	R	
City	Is the City of the Address.	R	
County	County in which the Address is in.	O	
StateOrProvince	Is the State or Province of a given Address.	R	Reference valid value rule USPS
Country	Country in which the Address is in.	R	
PostalCode	Postal Code of the Address.	R	Reference valid value rule USPS

XML Instance Representation

<pre><...> <AddressLine> AddressLine </AddressLine> [1..*] <City> City </City> [1] <County> County </County> [0..1] <StateOrProvince> StateOrProvince </StateOrProvince> [1] <Country> Country </Country> [1] <PostalCode> PostalCode </PostalCode> [1]</pre>

currency		R	

XML Instance Representation

```
<...  
currency="Currency [1]">  
  xsd:decimal  
</...>
```

ApplicationArea

These field(s) use this type: ApplicationArea.

Name	ApplicationArea
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
Sender	Identifies characteristics and control identifiers that relate to the application that created the Business Object Document. The sender area can indicate the logical location of the application and/or database server, the application, and the task that was processing to create the BOD.	R	

Show Parts Locator

Field / Component	Description	R/O	Business Rule
CreationDateTime	is the date time stamp that the given instance of the Business Object Document was created. This date must not be modified during the life of the Business Object Document.	R	DateTime fields must be formatted as XML Schema Datetimes in UTC/GMT format without offsets. Example: 2003-11-05T13:15:30Z
Signature	If the BOD is to be signed the signature element is included, otherwise it is not. Signature supports any digital signature that maybe used by an implementation of OAGIS. The qualifyingAgency identifies the agency that provided the format for the signature. This element supports any digital signature specification that is available today and in the future. This is accomplished by not actually defining the content but by allowing the implementation to specify the digital signature to be used via an external XML Schema namespace declaration. The Signature element is defined to have any content from any other namespace. This allows the user to carry a digital signature in the xml instance of a BOD. The choice of which digital signature to use is left up to the user and their integration needs.	O	
BODId	The BODId provides a place to carry a Globally Unique Identifier (GUID) that will make each Business Object Document instance uniquely identifiable. This is a critical success factor to enable software developers to use the Globally Unique Identifier (GUID) to build the following services or capabilities: 1. Legally binding transactions, 2. Transaction logging, 3. Exception handling, 4. Re-sending, 5. Reporting, 6. Confirmations, 7. Security.	O	
Destination	Information related to the receiver of the BOD	R	

XML Instance Representation

```
<...>
  <Sender> Sender </Sender> [1]
  <CreationDateTime> DateTime </CreationDateTime> [1]
  <Signature> Signature </Signature> [0..1]

Abstract	no

Attributes

Field / Component	Description	R/O	Business Rule
revision	This should contain the STAR repository version in the following recommended format. 4.2.1_M20080416. Where the first part indicates the version of the STAR repository and anything after the _ indicates the Milestone build that is being used. If referring to an official published version then only the STAR Repository version is required.	O	
release	Indicates the OAGIS release that this BOD belongs.	O	
environment	Indicates whether this BOD is being sent in a "Test" or a "Production" mode. If the BOD is being sent in a test mode, it's information should not affect the business operation. However, if the BOD is sent in "Production" mode it is assumed that all test has been complete and the contents of the BOD are to affect the operation of the receiving business application(s).	O	
lang	Indicates the language that the contents of the BOD is in unless otherwise stated.	O	
bodVersion	Deprecated as of STAR 4.2.2. It is recommended to use the revision attribute to identify the repository and the noun. May be removed in a new major version of the STAR repository. Indicates the version number of the BOD.	O

Data Elements and Components

Field / Component	Description	R/O	Business Rule
DestinationNameCode	Code for destination of file (i.e.Short Manufacturer or DSP code)	O	Must use a valid code from the ShortMfg/RSP list on http://www.starstandards.org
DestinationURI	Physical address of the destination	O	
DestinationSoftwareCode	Additional information about the destination application	O	
DestinationSoftware	For which software destination file is intended (may not be known).	O	
DealerNumber	Target Dealer Code receiving information	O	
StoreNumber	Dealer code store number (DMS assigned)	O	
AreaNumber	Dealer code area number (DMS vendor assigned)	O	

Show Parts Locator

Field / Component	Description	R/O	Business Rule
DealerCountry	Target Dealer country location	O	
PartyId	The Party Id field uniquely identifies the Receiver of the message. This element can be used for parties within the Automotive Community as well as external parties. Party Id is not intended as a replacement for the Dealer Number. Suggested formats for OEMs or other large institutions include: DUNs Number, ShortMfgCode + DUNs, or ShortMfgCode. The suggested format for Dealers is: ShortMfgCode+Dealer Number.	O	
LocationId	The Location Id field uniquely identifies the location of the Receiver of a message. This Id may be aligned with a physical address or data centers. This field provides an additional level of granularity beyond the usage of the Party Id for additional routing and deliver of data.		
ServiceId	The Service Id field identifies the particular service to which a message is being sent, e.g., an inventory service.	O

LocatedLine

These field(s) use this type: **LocatedLine.**

Represents the parts for which pricing and availability was determined.

Name	LocatedLine
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
LocatedLineUID	A unique identifier of the record. This value should have no business meaning and serves the purpose as the primary key in this component.	R	

Show Parts Locator

Field / Component	Description	R/O	Business Rule
ParentLocatedLineUID	For a child LocatedLine, this value is equal to the LocatedLine.LocatedLineUID value of the parent LocatedLine.	O	
SupplyingPartyUID	This field identifies the supplying party for the located line and must be equal to one of the SupplyingParties.Party.SupplyingPartyUID values.	R	
SupplyingPartyLocationUID	The SupplyingPartyLocation.SupplyingPartyLocationUID of the supplying party's location. The combination of SupplyingPartyUID and SupplyingPartyLocationUID must equal one of the records in SupplyingPartyLocations. This field is only populated when the LocatedLine has no child lines.	O	
RequestedLineUID	Only populated for LocatedLine components that do not have a parent LocatedLine, this field represents the LineNumber of the RequestedLine for which the pricing/availability is for. Must be equal to one of the RequestedLine.LineNumber values.	O	
LineNumber	LocatedLine components in the BOD can be grouped by RequestedLineUID or ParentLocatedLineUID. The value of this field represents a unique identifier for a locatedLine within one of those groups. Within one of these groups, LineNumber values should start at 1 and increment by 1.	O	
Part	Represents informatoin about the part for which pricing/availability information is being provided.	R	
ItemQuantity	The quantity of the part with the AvailabilityStatus at the location/supplier indicated within this component.	R	
DealerNetPrice	The total price to purchase the entire quantity of parts indicated within this component.	O	
SuggestedRetailPrice	The MSRP to purchase the entire quantity of parts indicated within this component.	O	
AvailabilityStatus	Indicates the status of the part at the supplying location.	O	
ChildLineReasonCode	For LocatedLines which have children, this value indicates the reason the children exist.	O	
ChildLinePricingAppliesInd	For LocatedLines which have children, this value indicates whether the pricing of the part is given by the parent line or its children.	O	

Show Parts Locator

Field / Component	Description	R/O	Business Rule
LastSoldDate	The date the part was last sold.	O	
LastInventoryDate	The last date inventory was updated for this part.	O	
PriceExplanation	An explanatory note for the pricing.	O	
SupplierItemId	The OEM part number. If the part is sold by a distributor, this is not their OEM part number. Works in conjunction with PartManufacturer.		
LineStatus	The Line Status component provides a reason for the availability status of a part and may also provide additional information about the part. .	O

Sender

These field(s) use this type: Sender.

Name	Sender
Abstract	no

Data Elements and Components

Field / Component	Description	R/O	Business Rule
LogicalId	Provides the logical location of the server and applications from which the Business Object Document originated. It can be used to establish a logical to physical mapping, however its use is optional. Each system or combination of systems should maintain an external central reference table containing the logical names or logical addresses of the application systems in the integration configuration. This enables the logical names to be mapped to the physical network addresses of the resources needed on the network. Note: The technical implementation of this Domain Naming Service is not dictated by this specification. This logical to physical mapping may be done at execution time by the application itself or by a middleware transport mechanism, depending on the integration architecture used. This provides for a simple but effective directory access capability while maintaining application independence from the physical location of those resources on the network	O	

Show Parts Locator

Field / Component	Description	R/O	Business Rule
Component	Provides a finer level of control than Logical Identifier and represents the business application that issued the Business Object Document. Its use is optional. For STAR's use this is the DCS Software code name		
Task	Describes the business event that initiated the need for the Business Object Document to be created. For STAR, the task is defined in the Implementation Guidelines for each BOD. It is usually a short description of the BOD. Ex: SalesLead, CreditDecision, etc.	R	
ReferenceId	Enables the sending application to indicate the instance identifier of the event or task that caused the BOD to be created. This is used to correlate a response BOD to an originating BOD	O	
AuthorizationId	Identifies the authorization level of the user or application that is sending the Business Object Document Message. This authorization level being recognized by the receiving system indicates what can be done on the receiving system. For STAR, this is the User ID.	O	
CreatorNameCode	DCS Software Creator Code	R	
SenderNameCode	Additional information about the sending platform (i.e., Short MFG or DSP code).	R	Must use a valid code from the ShortMfg/RSP list on http://www.starstandards.org
SenderURI	Physical address of the sender	O	
DealerNumber	Dealer Code of source of information	O	
StoreNumber	Dealer code store number (DMS assigned)	O	
AreaNumber	Dealer code area number (DMS vendor assigned)	O	
DealerCountry	Source Dealer country location	O	
Language	This code is used to define the language of the data used in this transaction	O	
DeliverPendingMailInd	Indicates if the user requests to receive pending mail that has been stored and has yet not been delivered yet. By selecting 0, the user will only receive the response for the current transaction the user is performing.	O	

Show Parts Locator

Field / Component	Description	R/O	Business Rule
Password	Token for application specific authentication. Used to authenticate dealership/users through application specific security	O	
SystemVersion	The sender's software version number.	O	
PartyId	The Party Id field uniquely identifies the Sender of the message. This element can be used for parties within the Automotive Community as well as external parties. Party Id is not intended as a replacement for the Dealer Number. Suggested formats for OEMs or other large institutions include: DUNs Number, ShortMfgCode + DUNs, or ShortMfgCode. The suggested format for Dealers is: ShortMfgCode+Dealer Number.	O	
LocationId	The Location Id field uniquely identifies the location of the Sender of a message. This Id may be aligned with a physical address or data centers. This field provides an additional level of granularity beyond the usage of the Party Id for additional routing and deliver of data.	O	
ServiceId	The Service Id field identifies the particular service from which a message is being sent, e.g., an inventory service.	O

Data Elements and Components

Show Parts Locator

Field / Component	Description	R/O	Business Rule
Show	The Show verb is used when sending the information about a specific instance of a business document or entity. The Show verb may be used to respond to a Get request or it can be used in a publish scenario, where it pushes information to other applications based on a business event. Although BODs based on this verb do not commonly cause updates to occur, there may be times when the component receiving the Show decides to use the information it receives to update. This is entirely the decision of the receiving software component and is not forbidden. The behavior of the Show verb is quite straight forward with one exception. The Show response to any Get request needs to read the request carefully to ensure the response is returning the requested Data Types.	R	
PartsLocator	The scope of this BOD is to define the Parts Locator process for individual dealers using either OEM or third party parts locator retrieval services to locate parts at either nearby dealership or parts distribution warehouse.	R

*Base XSD Type: string

PartClass

These field(s) use this type: **PartClass**.

Gifts, literature, keys, regular parts Inventory Class code (if any) used in DMS system.

Name	PartClass
------	-----------

*Base XSD Type: string

PartType

These field(s) use this type: **PartType**.

Specifies whether the parts are indicated by manufacturer part code or Part Number - H = Manufacturer Part Code, P = Part Number

Name	PartType
------	----------

*Base XSD Type: string

Code Value	Description
H	Manufacturer Part Code

Show Parts Locator

Code Value	Description
P	"P" = Pending

PartyName

These field(s) use this type: **PartyName**.

The name of the Party. The Party in the context of a Parts Locator is either a dealer, OEM supplier, or aftermarket distributor.

Name	PartyName
------	-----------

*Base XSD Type: string

PartyType

These field(s) use this type: **PartyType**.

Identifies if the supplier is a dealer or a supplier (OEM or aftermarket distributor).

Name	PartyType
------	-----------

*Base XSD Type: string

Code Value	Description
Supplier	OEM or aftermarket distributor
Dealer	Dealer
Other	Other
N/A	Not Applicable

PostalCode

These field(s) use this type: **PostalCode**.

Show Parts Locator

Postal Code of the Address.

Name	PostalCode
------	------------

*Base XSD Type: string

PreferredContactMethodOrganization

These field(s) use this type: PreferredContactMethod.

Preferred Contact Method Organization

Name	PreferredContactMethodOrganization
------	------------------------------------

*Base XSD Type: string

Code Value	Description
Day Phone	Day Phone
Cell Phone	Cell Phone
Work Fax	Work Fax
Pager	Pager
Work Email	Work Email
US Mail	US Mail

*Base XSD Type: string

ReferenceNumber

Reference number

Name	ReferenceNumber
------	-----------------

*Base XSD Type: string

RequestedSearchCriteriaType

These field(s) use this type: **RequestedSearchCriteriaType**.

Defines whether the search applies to Dealers, Suppliers or both Dealers and Suppliers.

Name	RequestedSearchCriteriaType
------	-----------------------------

*Base XSD Type: string

Code Value	Description
Dealer	Dealer
Supplier	OEM or aftermarket distributor
Dealer And Supplier	Searching dealers and suppliers
Other	Other
N/A	Not Applicable

Show Parts Locator

SalesPersonName

These field(s) use this type: SalesPersonName.

Name of Salesperson. Format for name should be "First Last" with no commas between first and last name

Name	SalesPersonName
------	-----------------

*Base XSD Type: string

SecondaryPassword

These field(s) use this type: SecondaryPassword.

Secondary password used to validate access to the dealer information

Name	SecondaryPassword
------	-------------------

*Base XSD Type: string

SelectionMethod

These field(s) use this type: SelectionMethod.

Method used to select dealer Example: PF for preferred, PM for PMA, DI for distance, etc.

Name	SelectionMethod
------	-----------------

*Base XSD Type: string

ShortMfg

These field(s) use this type: SenderNameCode, DestinationNameCode.

Short Manufacturer or RSP Codes

Name	ShortMfg
------	----------

*Base XSD Type: string

Show Parts Locator

StateOrProvince

These field(s) use this type: **StateOrProvince**.

Is the State or Province of a given Address.

Name	StateOrProvince
------	-----------------

*Base XSD Type: string

StatusCode

These field(s) use this type: **StatusCode**.

A code identifying the reason for the status message.

Name	StatusCode
------	------------

*Base XSD Type: string

Code Value	Description
Success	The operation completed successfully. This does not necessarily mean that the BOD was processed. Instead it means that the client's role is done and that it won't receive any error messages later. Type of Response Code: Success.
Unspecified	An unspecified error occurred. The StatusText field contains the complete text.
Not In Inventory	Inventory is not currently available and back ordering was not requested.
Discontinued	The part has discontinued.
Invalid Part	Invalid part number.
Not Yet Available	The part is scheduled for a future release date and is not available at this time.
Not Authorized	The part is not authorized for your product line.
Under Development	The part is under development and not ready for sale.
Assembly Only	The part is a component part and is only available as an assembly.
Component Only	The part is an assembly part and is only available as a component.

Show Parts Locator

Code Value	Description
Internal Use Only	The part is reserved for manufacturing and supplier internal use; it is not a service replacement part.
Recalled	The part has been recalled.
Cannot Sell	The part is not available for sale for an unspecified reason.
Export Only	The part is not available for sale in the United States; it is for export vehicles only.
Credit Limit Exceeded	Credit limit exceeded.
Credit Card Denied	Credit card transaction denied by creditor.
Account On Hold	The dealer's account has been put on hold.
Invalid Unit Of Measure	The unit of measurement was invalid for this part number.
Invalid Promotion Code	The promotion code is invalid.
Invalid Shipping Method	The shipping method is invalid, for example, shipping by ground to Puerto Rico.
Duplicate Line Number	The line number is the same as another line within this transaction.
No Drop Shipment	Drop shipments are not allowed.
No Will Call	Will-call pickups are not allowed.
Minimum Quantity Not Met	There is a minimum quantity purchase requirement for this part and the quantity has not been met. The minimum quantity is: NN
Other	Other
N/A	Not Applicable

StatusText

These field(s) use this type: **StatusText**.

Descriptive status text.

Name	StatusText
------	------------

Show Parts Locator

*Base XSD Type: string

StatusType

These field(s) use this type: **StatusType**.

Defines the type of status that occurred. EX: S-Success, E-Error, I-Info, A-Abort

Name	StatusType
*Base XSD Type: string	
Code Value	Description
Success	The operation completed successfully. This does not necessarily mean that the BOD was processed. Instead it means that the client's role is done and that it won't receive any error messages later. Type of Response Code: Success.
Error	The operation resulted in error and did not succeed.
Warning	The operation completed a warning.
Informational	The provided StatusText is informational.
Other	Other
N/A	Not Applicable

SystemVersion

These field(s) use this type: **SystemVersion**.

The sender's software version number .

Name	SystemVersion
*Base XSD Type: string	

Text

Show Parts Locator

These field(s) use this type:

*Base XSD Type: string

Code Value	Description
ea	Each
bx	Box
case	Case
ctn	Carton
gal	Gallon
qt	Quart
pt	Pint
ft	ft = feet
yd	yd = yard
in	in = inch
L	"L" = Canceled
m	m = meter

Show Parts Locator

Code Value	Description
cm	cm = centimeter
kg	Kilogram
g	Gram
other	
tn	Ton
km	kilometers
mi	miles
hp	horsepower
kw	kilowatt

UrbanizationCode

These field(s) use this type: **UrbanizationCode**.

Geographic definition of a metropolitan or suburban area

Name	UrbanizationCode
------	------------------

*Base XSD Type: string

URI

These field(s) use this type: **SenderURI, DestinationURI, URI**.

ZoneCode

These field(s) use this type: ZoneCode,ZoneCode,ZoneCode,ZoneCode.

Manufacturer Assigned Zone Code

Name	ZoneCode
------	----------

*Base XSD Type: string

Fields and Global Attributes

Global declarations are items such as elements, attribute groups, and group definitions. These items are not defined within any particular component. A component may reference these definitions. Within a STAR XML Schemas these are typically known as global fields.

ApplicationArea

These field(s) use this type: **ApplicationArea**.

Provides the information that an application may need to know in order to communicate in an integration of two or more business applications. The ApplicationArea is used at the applications layer of communication. While the integration frameworks web services and middleware provide the communication layer that OAGIS operates on top of.

Provides the information that an application may need to know in order to communicate in an integration of two or more business applications. The ApplicationArea is used at the applications layer of communication. While the integration frameworks web services and middleware provide the communication layer that OAGIS operates on top of.

Name	ApplicationArea
Type	ApplicationArea
Nilable	no
Abstract	no

XML Instance Representation

```
<ApplicationArea>
  <Sender> Sender </Sender> [1]
  <CreationDateTime> DateTime </CreationDateTime> [1]
  <Signature> Signature </Signature> [0..1]
  <BODId> Code </BODId> [0..1]
  <Destination> Destination </Destination> [1]
</ApplicationArea>
```

Header

The Header component represents summary information for the entire Parts Locator.

</Header>
```

LocatedLines

These field(s) use this type: **LocatedLines**.

Represents the parts for which pricing and availability was determined.

Name	LocatedLines
Type	LocatedLines
Nilable	no
Abstract	no

XML Instance Representation

```
<LocatedLines>
  <LocatedLine> LocatedLine </LocatedLine> [1..*]
</LocatedLines>
```

Show Parts Locator

PartsLocator

These field(s) use this type: **PartsLocator**.

The scope of this BOD is to define the Parts Locator process for individual dealers using either OEM or third party parts locator retrieval services to locate parts at either nearby dealership or parts distribution warehouse.

Name	PartsLocator
Type	PartsLocator
Nullable	no
Abstract	no

XML Instance Representation

Show Parts Locator

RequestedLines

These field(s) use this type: **RequestedLines**.

Represents the parts for which pricing and availability is being requested.

Name	RequestedLines
Type	RequestedLines
Nilable	no
Abstract	no

XML Instance Representation

```
<RequestedLines>  
  <RequestedLine> RequestedLine </RequestedLine> [1..*]  
</RequestedLines>
```

Show

These field(s) use this type: **Show**.

The Show verb is used when sending the information about a specific instance of a business document or entity. The Show verb may be used to respond to a Get request or it can be used in a publish scenario, where it pushes information to other applications based on a business event. Although BODs based on this verb do not commonly cause updates to occur, there may be times when the component receiving the Show decides to use the information it receives to update. This is entirely the decision of the receiving software component and is not forbidden. The behavior of the Show verb is quite straight forward with one exception. The Show response to any Get request needs to read the request carefully to ensure the response is returning the requested Data Types.

Name	Show
